Study Programme Accreditation

Energy and Process Engineering

Standard 00. Introduction

MASTER ACADEMIC STUDIES

Energy and Process Engineering in educational sense should be considered as a study programme created as a response to practical need. This programme should enable students to additionally acquire knowledge based on understanding fundamental physical principles in Energy and Process Engineering and other fields, to master additional professional knowledge for realization of modern energy and process systems, to acquire ability to integrate continually applicable knowledge and to get introduced to research work.

FACULTY OF TECHNICAL SCIENCES 21000 NOVI SAD, TRG DOSITEJA OBRADOVIĆA 6

Study Programme Accreditation

Energy and Process Engineering

Standard 01. Programme Structure

MASTER ACADEMIC STUDIES

The name of this study programme of graduate academic studies – master is Energy and Process Engineering. Academic name acquired is Master in Mechanical Engineering. The outcome of the study process is knowledge which enables students to use professional literature, to solve professional problems and to continue studies if students choose to do so.

The prerequisites for enrolling the study programme are completed undergraduate studies with at least 240 ECTS and passed enrolment exam.

The study programme of graduate academic studies Energy and Process Engineering last one year.

Lectures are realized through lectures and practical classes. During education process emphasis is placed on independent and research student work, as well as on their personal involvement in the process. During lectures, modern didactic tools are used for presenting subject content and students are informed about research trends in the field. During practical classes, which follow the lectures, actual exercises and problems are solved and appropriate examples are presented. Also additional explanations of the subject content are offered in practical classes. Practical classes can be auditory, laboratory and computer. Partially practical classes can be realized in factories and other institutions.

The number of students in a group depends on the character of the practice classes. Students are obliged to write seminar papers and homework, projects, semestral and graphic papers. Every student activity is monitored and awarded according to the regulations adopted by the Faculty. The number of awarded credits is determined by a unique methodology and reflects student involvement.

A REAL PROPERTY OF

Study Programme Accreditation
MASTER ACADEMIC STUDIES Energy and

Energy and Process Engineering

Standard 02. Programme Objectives

The purpose of the study programme – Energy and Process Engineering is set in accordance with the needs of the society.

The study program of the Master studies in Energy and Process Engineering is set so that it enables students to acquire competences socially justifiable and purposeful. The Faculty of Technical Sciences has clearly defined educational assignments and objectives for highly competent experts in the field of technical engineering. The aim of the study programme - Energy and Process Engineering is completely in accordance with the Faculty of Technical Sciences objectives.

Realization of such a study programme creates experts in the field of Construction Mechanics and Mechanizations competent in European and global standards and in accordance with social needs.

FACULTY OF TECHNICAL SCIENCES 21000 NOVI SAD, TRG DOSITEJA OBRADOVIĆA 6

Supervision of the second

Study Programme Accreditation
MASTER ACADEMIC STUDIES Energy and

Energy and Process Engineering

Standard 03. Programme Goals

The objective of the graduate academic studies in Energy and Process Engineering is acquiring competences and academic skills in the field of Energy and Process Engineering. In addition, this programme will provide graduates with practical skills, as well as form and develop competences necessary for critical thinking and team work and acquiring specific practical skills necessary for the profession.

The objective of the study programme of graduate academic studies in Energy and Process Engineering is to educate and form highly qualified experts able to perform tasks in production technologies and designing contemporary production process.

In addition, this programme will provide graduates with practical skills, as well as form and develop competences necessary for the technical sciences. The objective of this study programme is also education of experts in team working as well as development of abilities of presentation of results to professional public.

FACULTY OF TECHNICAL SCIENCES 21000 NOVI SAD, TRG DOSITEJA OBRADOVIĆA 6

Study Programme Accreditation

Energy and Process Engineering

MASTER ACADEMIC STUDIES Standard 04. Graduates` Competencies

Having completed the graduate academic studies in Energy and Process Engineering, a student acquires general and subject-specific abilities in the function of qualitative performance of professional, scientific and artistic activities. Having completed this study programme, a student acquires the following general abilities:

- Ability to analyse, generate and anticipate consequences,

- Ability of critical thinking,

- Ability to solve problems by applying scientific methods and procedures

Master student acquires thorough knowledge and understanding of all disciplines of the selected study group, as well as skills for solving actual problems with utilization of scientific methods and procedures. Students at the Energy and Process Engineering are capable to write and present in an appropriate way the results of their work. Utilization of information and communication technologies is insisted upon.

The students at this level have competencies for following and application of novelties in the line of profession, as well as for cooperation with local social and international environment.

The students are enabled to design, organize and manage production. During education process student is enabled to independently conduct experiments, for statistical data processing as well as to formulate and reach appropriate results.

Upon graduation, student acquires knowledge to economically use natural resources of the Republic of Serbia in accordance of principles of sustainable development.

Special attention is paid to skill development for team work and professional ethics.

FACULTY OF TECHNICAL SCIENCES 21000 NOVI SAD, TRG DOSITEJA OBRADOVIĆA 6

Study Programme Accreditation

Energy and Process Engineering

Standard 05. Curriculum

MASTER ACADEMIC STUDIES

The curriculum of the study programme of Energy and Process Engineering is formulated so that it meets all set objectives. The structure of the study programme provides the choice of selective courses with at least 30% ECTS.

Master students expand knowledge of production engineering in specific characteristics of problems which each study group deals with. Through selective courses satisfy their interests that they developed during the studies. All subjects are one semester long and are awarded appropriate number of ECTS, and one credit equals approximately 30 hours of student activities.

The curriculum is defined description of subjects which contains title, subject type, academic year and semester, ECTS, professors name, subject objective with expected outcomes, knowledge and competences, prerequisites for attending the subject, subject content, recommended literature, teaching methods and knowledge evaluation.

The study programme is in accordance with European standards in terms of enrolment, study duration, preconditions for transferring to the following academic year, acquiring diploma and studying way.

The integral part of the curriculum of production engineering is professional practice and practical work in duration of 45 hours, realized in appropriate scientific and research institutions, in organizations for innovation activities. Student finishes the studies with elaboration of master thesis consisting of theory and methodological application of preparation necessary for understanding the field of master thesis.

Prior to defending the thesis, student passes theoretical and methodological fundamentals before a commission which is appointed for thesis defence. The final master grade is calculated on the bases of results of passed theoretical and methodological preparation and evaluation of elaboration and defence of the thesis. The thesis is defended before the commission which consists of at least 3 teachers among which at least one needs to be from another department of faculty.

1. Educ	ational goal:											
ecologi consum This is e	1. Educational goal: Students will be thought to: individually study principles of energy management, importance of energy management in energy efficiency, ecological, economical and developing the best energy supply of final energy, understanding the interconnections of all energy consumers in production processes and buildings, energy flows, energy transformation systems and satisfying the final energy needs. This is especially highlighted from the aspect of long term planning, sustainable development of final energy users and influence of energy flow on development and progress: ecological, economic and social conditions

Course: Unconventional systems for heating and cooling Course id: M3410 Number of ECTS: 7 Teacher: Bjelaković M. Radivoje Course status: Elective Number of active teaching classes (weekly) Other teaching types: Lectures: Practical classes: Study research work: Other classes: 2 2 0 0 0 Precondition courses None 1. Educational goal: Introduction to nonconventional heating and cooling systems and saving measures in consumption of energy sources. Development of engineering approach in designing and system operations. 2. Educational outcomes (acquired knowledge): Acquiring knowledge for carrying out elaborate, studies and projects, as well as cration of non conventional systems of heating and cooling. Knowedge application in further education and practical work. 3. Course content/structure: Nonconventional heating and cooling systems, general terminology, comparison to convetional systems. Fundamental parts of systems. Relevant factors for application of non conventional heating and cooling systems, climate conditions, urban planning, degree of economical development of the country. Regenerational thermal sourses, earth, water, air. Solar energy, other renewable energy sources, Solar energy, application principles, devices for solar energy utilization. Systems for solar energy application. Heating systems with thermal pump. Temperature state systems. System and regulation management. Foundation preparation for system designing. Technological and economical analysis of application of non conventional heating and cooling systems. 4. Teaching methods: Lectures, practical classes, consultations and instalation and plant visits. Theoretical part is presented in lectures with practical examples. Practical classes cover computer examples in designing and realized solutions. Additonal clarifications are offered in consultations. Educational goal: The goal of this course is the introduction of the basic principles of membrane operation processes for the purpose of energy savings in the industry and the development of new "green" technologies. 2. Educational outcomes (acquired knowledge): Training for the right selection and proper application of membrane process in the industry. 3. Course content/structure: Classification of membrane operation by: the driving force, the organization of the flow of fluids, and other criteria. Analysis of the basic demands of membrane separation processes such as fractionation, concentration, etc.. Acquiring the principle of operation of certain membrane processes. Application of membranes in the industry for the purpose of energy saving and the development of new "green" technologies. Special emphasis on the use of membranes in the industry of our region. 4. Teaching methods: Lectures, computer tutorials, laboratory and computational exercises, auditory and industry practice and consultations. Interactive teaching. Seminar assignments, short presentations and projects are forms of pre-examination obligations that are done individually or in groups of two and /or more students, depending on the complexity of the task. plants a	1. Educational goal: Modern technical solutions are making complex unity in which energy part is almost always is an integral part. The most important energy plants are independent unities connected with the consumers by distributive and transmission systems. According to that fact, at least elementary knowledge of energetics is needed for those who are involved at any kind of job of management and use of energy.

Study Programme Accreditation

MASTER ACADEMIC STUDIES

Energy and Process Engineering

The study programme is coordinated with contemporary trends and situation in profession, science and art in adequate educational scientific or educational artistic field and it is compatible with similar programmes in international higher education institutions.

The study programme of Energy and Process Engineering is created as a comprehensive programme and provides students latest scientific knowledge in the field.

The programme of Energy and Process Engineering is comparable and coordinated with the following faculties:

Fakultet strojarstva i brodogradnje, Zagreb

Fakultet za strojnistvo, Ljubljana

Technische universitaet, Berlin

Technische universitaet, Graz

FACULTY OF TECHNICAL SCIENCES 21000 NOVI SAD, TRG DOSITEJA OBRADOVIĆA 6

Study Programme Accreditation

Energy and Process Engineering

Standard 07. Student Enrollment

MASTER ACADEMIC STUDIES

A higher education institution, in accordance with social demands and its resources, enrols students to adequate study programme based on their success in the previous education and entrance examination testing their knowledge, aptitudes and skills. Selection of students and their enrolment is based on success in previous education and success in the enrolment exam and in accordance with Faculty Regulation for student enrolment to study programmes.

Students from other study programme can transfer to this study programme as well as persons who completed studies. The evaluation commission (consisting of Heads of Departments included in study programme realization) evaluates all passed exams and on the bases of recognized exams decides whether the candidate's previous success can completely or partially be recognized. The Commission can require appropriate additional differential exam or not to recognize any of the previously passed exam.

FACULTY OF TECHNICAL SCIENCES 21000 NOVI SAD, TRG DOSITEJA OBRADOVIĆA 6

Study Programme Accreditation

MASTER ACADEMIC STUDIES

Energy and Process Engineering

Standard 08. Student Evaluation and Progress

The evaluation of students is performed by continual monitoring of students' accomplishments and the points obtained in fulfilling prerequisites and taking examinations.

The students master the study programme by taking examinations and thus obtaining a certain number of ECTS credits, in accordance with the study programme of graduate academic studies in Energy and Process Engineering.

Each course at the study programme has a set number of ECTS credits which students obtain on successfully passing the examination. Students' success in mastering a certain course is constantly monitored during classes and is presented in points. Maximum number of points obtained in a course is 100. Students obtain points from a course through their work during classes, fulfilment of their prerequisites and taking the examination. Each course at the study programme has a clear and publicly known mode of obtaining points.

A students final achievement at a course is presented using grades from 5 (fail) to 10 (excellent). A student's grade is based on the overall number of points obtained on fulfilling prerequisites and taking the examination, and in accordance with the quality of acquired knowledge and skills.

For a student to be allowed to take an exam, he/she needs to be awarded at least 15 ECTS credits in subject's prerequisites. Additional terms for taking an exams are defined for each subject individually. Student's advancement during the studying is determined by Regulations for studying at graduate academic studies.

Standard 09. Teaching Staff

For the realization of the study programme, there is the faculty staff with necessary scientific, artistic and professional qualifications.

Total number of lecturers and associates employed at the study programme is adequate to accomplish the total number of classes in the study programme so that the professor performs on average 180 active classes annually (lectures, consultations, practical classes, practical work, etc), that is 6 classes weekly. All lecturers are full time employed at the Faculty.

Number of associates corresponds the needs of the study programme. Total number of associates in study programme is enough to cover total number of classes so that associates realize 300 classes on average of active classes annually, that is 10 classes weekly.

Scientific and professional qualifications of lecturers an assistants is in relation to educational and scientific field. Each professor has at least five references in the professional field in which he/she performs the lectures.

Group size for classes is up to 32, practical classes groups is up to 16, and laboratory practical classes groups up to 8 students.

None of the professors has more than 12 classes weekly. All data on lecturers and assistants (CV, references) are publicly available.

Study Programme Accreditation

Energy and Process Engineering

Standard 10. Organizational and Material Resources

To perform a study programme, the adequate human, spatial, technical and technological, library and other resources suitable to the study programme features and predicted students` number are to be provided. Lectures at this study programme is realized in two shifts, so the required minimum of space 2m2 per student is met.

There is also an adequate equipment of all courses with the appropriate textbook literature, devices and supplementary equipment available on time and in a sufficient number for normal performance of the teaching process. Likewise, the Faculty of Technical Sciences has its own library, with well equipped and for this study programme adequate library funds. The adequate information technology is also available for performing the study programme.

FACULTY OF TECHNICAL SCIENCES 21000 NOVI SAD, TRG DOSITEJA OBRADOVIĆA 6

Study Programme Accreditation

Energy and Process Engineering

Standard 11. Quality Control

MASTER ACADEMIC STUDIES

The quality control of the study programme is performed regularly and systematically through selfevaluation and external quality control.

The quality control process comprises the continual monitoring of the quality of lecturing and the quality of resources necessary for the successful efficiency of undergraduate studies. Quality control bodies are the following: Board for Quality and Self-Evaluation, Committee for Quality and Committee for Undergraduate Studies Quality with undergraduate studies study programme executives-in-charge.

The study programme quality is evaluated on the basis of lecturers' competence, students' participation and involvement in scientific and research projects, resource wealth (contemporariness of equipment, contemporariness of available literature in libraries and bases), and the number of scientific publications realized during studies.

During the quality control of a study programme, the active role of students and their evaluation of the programme quality are also provided.
