### Study Programme Accreditation

Safety at Work

UNDERGRADUATE ACADEMIC STUDIES

Standard 00. Introduction

The study programme of the undergraduate academic studies in Occupational Safety Engineering is designed as a highly interdisciplinary and multidisciplinary study programme. The programme of the undergraduate studies in Occupational Safety Engineering is comprised of educational and research fields of the engineering profession, thus forming the curriculum which represents the interdisciplinarity of the programme. In the realization of the programme, curriculums in occupational safety with an emphasis on environmental engineering, mechanical engineering, power engineering, electrical engineering, management, civil engineering and basic scientific disciplinary of mathematics, chemistry, physics and others are studied, thus completing the multidisciplinary image of the study programme in Occupational Safety Engineering.

The interdisciplinary approach to occupational safety at the Undergraduate Academic Studies is of great significance for the recognition of the importance of safety considerations, its acknowledgment and building the high level of safety culture and awareness in the workplace.

Occupational Safety Engineering is a programme which resulted as an answer to the individual, state, social, industrial, economic and institutional needs facing the issues of occupational safety and needing the occupational safety engineers with an interdisciplinary knowledge in this field. The concept of the study programme enables students to acquire knowledge and recognize issues of the occupational safety on time and to act on them both globally and locally in order to eliminate them. By studying these problems, as well as the new forms of endangering occupational safety, students can better understand concepts, systems and functions of the modern safety, keeping in mind that the safety of people, countries, international communities is very complex and brings many challenges. Such concept of the study programme of the undergraduate academic studies contributes to the development of civil society in terms of occupational safety (general, national, individual), environmental and population protection from the natural disasters and chemical accidents, health and social protection, defence from the modern forms of endangerment of human and social resources with the orientation on the interdisciplinary approach.

FACULTY OF TECHNICAL SCIENCES 21000 NOVI SAD, TRG DOSITEJA OBRADOVIĆA 6

## Study Programme Accreditation

UNDERGRADUATE ACADEMIC STUDIES

Safety at Work

Standard 01. Programme Structure

The title of the study programme of the undergraduate academic studies is Occupational Safety Engineering. The acquired academic title is Bachelor in Occupational Safety Engineering. The outcome of the studying process is the knowledge which enables students to use professional literature, apply knowledge to the problems which occur in the profession, and enables the continuation of the studies if students decide so.

The study programme prerequisite for the enrolment is completed four-year high school and the passed enrolment examination. Enrolment examination is taken in mathematics and preference test (it is valued max. 60 points) and is considered to be passed if the candidate wins at least 14 points.

There is one study group at the undergraduate studies lasting four years: Occupational Safety Engineering. After enrolling the fourth year, students have a choice of elective courses besides obligatory courses, which they can choose from based on their personal preferences. The difference in the contents of the elective courses enables students to gain detailed knowledge in the course related field.

Obligatory courses, as well as elective courses are defined based on the dominant, identified problems of occupational safety in industry, economy and sciences, for sustainable solution of serious and accumulated problems in the working environment in our country, region and globally, as well as based on the experience of the similar study programmes in the EU countries and other world countries.

Elective courses are chosen from the group of suggested courses, but students have the possibility to choose one of the courses from the FTN, UNS or some other University in the country or abroad according to their personal preferences and with the professor approval.

The course consists of lectures and practice. During the lectures theory is presented using the adequate didactic tools, but students are also presented with the research trends in the specific field. During practice, which accompanies lectures, students work on the specific designing problems or research topics dealing with the field of study, thus coming to direct contact with the matter being taught. Practice gives additional explanation of the matter being taught during the lectures. Practice may be auditory, laboratory, computer or computing. Part of the Practice may be carried out in the factories or other institutions.

Groups are determined depending on the Practice character. Student obligations during the Practice may include writing of the term papers and homework assignments, project assignments, term and graphic papers while each student activity during the teaching process is monitored and evaluated according to the rules adopted at the Faculty level. The number of obtained credits is presented according to the unique methodology and it represents the workload per student.

Each course is worth certain number of ECTS credits, and the studies are completed when the student fulfils all obligations predicted by the study programme and collects at least 240 ECTS in the process. Power Point presentations from the lectures and practice can be found at the faculty website:

http:/www.ftn.ac.yu/\_data/nastava/ and the Department website: www.izzs.ns.ac.yu

FACULTY OF TECHNICAL SCIENCES 21000 NOVI SAD, TRG DOSITEJA OBRADOVIĆA 6

## Study Programme Accreditation

Safety at Work

UNDERGRADUATE ACADEMIC STUDIES

Standard 02. Programme Objectives

The purpose of the Study Programme is the education of students for the profession of Bachelor in Occupational Safety Engineering in accordance with the needs and the development of the country and with very complex engineering problems in the working environment which have to be solved with an objective of social and sustainable development.

The programme contents of these studies enable students to acquire and adopt wider spectrum of interdisciplinary knowledge and skills in the field of emergency situation management and risk management in the field of environmental protection and occupational safety. These programme contents enable education of highly professional staff who will be working on the complex multidisciplinary tasks of occupational safety.

The Study Programme Occupational Safety Engineering is designed to provide the acquisition of competences and qualifications that are socially justified and useful. Faculty of Technical Sciences defined tasks and goals for educating highly competent personnel in the field of technical sciences and engineering. The purpose of the Study Programme of Occupational Safety Engineering is completely in accordance with the basic objectives and goals of the Faculty of Technical Sciences.

Graduated engineers of Occupational Safety Engineering – Bachelors are educated by realization of the study programme designed in this way and possess competences, comparability and competitiveness in the European and worldwide circles.

FACULTY OF TECHNICAL SCIENCES 21000 NOVI SAD, TRG DOSITEJA OBRADOVIĆA 6

## Study Programme Accreditation

UNDERGRADUATE ACADEMIC STUDIES

Standard 03. Programme Goals

The objective of the study programme is to achieve student's scientific competencies and academic skills in the field of Occupational Safety Engineering. Besides others, students are able to develop creative engineering abilities in considering problems of occupational safety and the ability of critical and analytical thinking, the development of teamwork skills, cooperation and communication skills, and the mastering of specific practical skills necessary for optimal professional work.

The objective of the study programme is to educate an expert who possesses necessary knowledge in basic scientific disciplines (mathematics, physics, chemistry, mechanics, thermo dynamics) in order to create a real image about processes happening in industrial systems and environment as well as in the classical and specialized engineering disciplines with an emphasis on the occupational safety in mechanical engineering, electrical engineering, programming and application of professional scientific disciplines in the filed of occupational safety. The objective is to enable future occupational safety engineers to carry out projects in this field and to acquire the licence from the authorities.

One of the specific objectives which is in accordance with educational objectives of experts at the Faculty of Technical Sciences is to develop students' awareness of the need for permanent education (long life learning 3L), the development of a society in general and the occupational safety. The objective of the study programme is also to educate experts in the domain of the teamwork, while developing the ability to present results to the professional and wider public.

FACULTY OF TECHNICAL SCIENCES 21000 NOVI SAD, TRG DOSITEJA OBRADOVIĆA 6

## Study Programme Accreditation

UNDERGRADUATE ACADEMIC STUDIES

Safety at Work

Standard 04. Graduates` Competencies

Graduate students of the undergraduate academic studies in Occupational Safety Engineering are competent and qualified to solve real problems in the practice, as well as to continue education if they decide so. The competences include, above all, the development of the ability for critical thinking, ability of problem analysis, solution synthesis, behaviour prediction of the chosen solution with the clear idea of advantages and disadvantages of the chosen solution.

When it comes to the specific capabilities of students, mastering the study programme of the undergraduate studies, the students acquires detailed knowledge and understanding of all disciplines of the chosen study group, as well as the ability for solving specific problems using the scientific methods and procedures. Considering the interdisciplinary character of the study programme of Occupational Safety Engineering it is especially important to gain the ability of connecting fundamental and technical disciplines, holistic approach and the basic knowledge in different fields and their application. Graduated students of Occupational Safety Engineering are able to adequately define and present results of their work by intensive use of information-communication technologies.

Graduated students from this level of study possess additional competences for the application of knowledge in the practice and anticipation and application of the novelties in practice, as well as solving problems at all levels in cooperation with local social and international environment.

Students are enabled to design projects, organize and manage occupational safety. During their education, students acquire knowledge to independently plan and carry out experiments of statistical data processing as well as to define and make specific, real and applicable conclusions.

During the study programme ability to work in a team and to develop professional ethics is especially nourished and developed in students.

FACULTY OF TECHNICAL SCIENCES 21000 NOVI SAD, TRG DOSITEJA OBRADOVIĆA 6

Study Programme Accreditation

Safety at Work

UNDERGRADUATE ACADEMIC STUDIES

Standard 05. Curriculum

The curriculum of the undergraduate academic studies in Occupational Safety Engineering is designed for the purpose of achieving defined goals and competencies. The structure of the curriculum is defined with 15% of academic general courses, ca. 20% of theoretical-methodological courses, about 35% of scientific-professional courses, and about 30% of professional-applicative courses out of the total number of the study programme points.

Elective courses are also present with at least 20% of the ECTS credits. Besides this classification, the study programme of Occupational Safety Engineering, which comprises of these courses, can also be divided into the following groups:

-the group of courses in fundamental engineering disciplines (mathematics, chemistry, biology, mechanics),

-the group of courses in mechanical engineering, power engineering, civil engineering, management

-the group of courses with the narrow professional orientation in solving specific problems in health and safety at work.

The first three years represent basic, general and common education of the students at the educational study programme in Occupational Safety Engineering, while after the third year students attend courses with the narrow professional orientation in solving specific problems in the field of occupational safety.

In the fourth year, specific problems in Occupational Safety Engineering are concretized based on the course characteristics. During the fourth year there are obligatory and elective courses. Through elective courses, students meet their affinities profiled during the first three years of studies in cooperation with the professors.

All courses last one semester and carry certain number of ECTS credits. The course order in the curriculum is in a logical order of knowledge necessary for the next course and is acquired in the previously realized courses.

The curriculum includes the description of each course containing the name, type of article, year and semester, the number of ECTS credits, the name of the teacher, the course aims with expected outcomes, knowledge and competencies, prerequisites for attending the course, course content, recommended literature, methods of teaching, the way of knowledge testing and assessment and other data. The study program is consistent with European standards in terms of conditions of enrolment, duration of study, conditions of transition to the next year, graduation, and modes of study.

An integral part of the curriculum of Occupational Safety Engineering is a professional practice and practical work of 120 hours, which is implemented in the relevant scientific research institutions, in organizations for innovation activities, in organizations which provide infrastructural support to innovation activities, in enterprises and public institutions. A student is completing his/her studies by elaboration bachelor thesis, which consists of theoretical and methodological preparation necessary for in-depth understanding of the chosen field for writing bachelor thesis paper.

Prior to the defence of the paper, a candidate has to pass the theoretical and methodological foundations in front of the bachelor thesis mentor. The final assessment of the bachelor thesis is performed on the basis of the passed theoretical and methodological preparation and elaboration evaluation and defence of the thesis itself. Bachelor thesis is defended before a committee consisting of at least three professors.

Course:					
Course id:	Z107	]	Electrical Engine	ering, Environment and F	rotection
Number of ECTS:	6				
Teachers:		Grabić U	. Stevan, Juhas T. Anamarija,	Katić A. Vladimir, Prša A. Miroslav	
Course status:		Mandato	ry		
Number of active tea	ching class	es (weekly	/)		
Lectures:	Practica	classes:	Other teaching types:	Study research work:	Other classes:
3		1	2	0	0
Precondition courses	3		None		
1. Educational goal:					

The course objective is to study basic concepts about time constant and time variable electrical currents, about electricity and electrical properties of materials. Besides, the objective is to present the way of operation of electrical energy system and electric machines (ways of operation, principles, types etc.), as well as the possibility of their application in the modern electric motor drives, that is, in the systems of environmental protection (removal of smoke and harmful gasses, removal of waste waters, transport of hazardous materials etc.). The objective is to present phenomena which have an impact on the electric environment and the living environment due to PES operation and electric consumers, as well as the modern standards and methods of protection.

2. Educational outcomes (acquired knowledge):

Students will be able to understand basic concepts about time constant and time varying electric currents. They will master the concepts about electricity and electric properties of materials. They will be able to understand the way of operation of power electric systems and their main consumers (electric machine etc.). They will be able to apply modern electric machines and electric motor drives in the environmental protection systems (removal of smoke and harmful gasses, removal of waste water, transport of hazardous material etc.). They will understand the phenomena which have an impact on the electric environment and the living environment and will be able to apply modern standards and methods of protection.

3. Course content/structure:

Basic concepts about electric energy. Direct current. Alternating current. Principles of solving electric networks. Organization of the modern power electric system - Production, transmission and consumption of electrical energy. Electric environment, electric machines. Principles of electromechanical energy conversion- Types of electric machines, basic elements and characteristics. Transformators. Rotational electric machines. Alternating machines. Asynchronous machines - squirrel cage and wound rotor motors. Direct machines. Synchronous machines. Negative impact of electric energy - radiation and conducted disturbances. Electric environment - Impact on other devices, impact on living beings. Electromagnetic field of transmission line, transformators and switchyards - standards and recommendations. Methods of protection.

4. Teaching methods:

The course will be lectured through presentation of theoretical principles during lectures, by solving adequate problems during auditory practice and by practical work in the laboratory and in the plants (demonstrations and practice).

Table 5.2 Course specification

Course:	_										
Course id:	IM1005		Entrepreneurship								
Number of ECTS:	6										
Teachers:		Borocki \	orocki V. Jelena, Mitrović R. Vojin								
Course status:		Elective									
Number of active teac	hing classe	es (weekly	)		-						
Lectures:	Practical	classes:	Other teaching types:	Study research work:	Other classes:						
2	2	2	0	0	2						
Precondition courses			None								

#### 1. Educational goal:

The main objective of this course is to provide (1) an understanding of the basic concepts and practice of entrepreneurship and entrepreneurial thinking, (2) understanding of the importance of entrepreneurship and innovation to new demands of various segments of the economy, (3) understanding of the process of converting business ideas into entrepreneurial ventures. The goal of this course is to provide all students with an understanding of the creation of an entrepreneurial environment in enterprises regardless of their structure, size and economic activity and to enable them to understand the prerequisites of starting their own business.

2. Educational outcomes (acquired knowledge):

Students who finish the course and pass the examination in this subject, are trained to (1) understand the basic concepts of entrepreneurship, recognize entrepreneurial traits and develop entrepreneurship in their attitude and behaviour towards the business environment, (2) analyze and apply basic elements independently of the process of design, implementation and control of the business idea, (3) develop and adopt the key principles of the entrepreneurial process, and understand the specific problems of starting their own business and if necessary overcome them. They will be familiar with the basic influence of business and other relevant institutions on the development of entrepreneurship.

#### 3. Course content/structure:

The introductory part (role and importance of entrepreneurship for economic and enterprise development, entrepreneurship development up to nowadays). Basic concepts of entrepreneurship, principles and rules of entrepreneurship. Myths of Entrepreneurship, Entrepreneurship for the 21st century, new jobs and business skills of engineers and managers, Innovation and Entrepreneurship in new conditions. Entrepreneur and Entrepreneurship (concept and definition of entrepreneurs, characteristics, skills and abilities, and examples of successful and poor entrepreneurs). Engineer, manager, entrepreneur (similarities and differences, necessary skills, integration of skills and knowledge). Importance of the idea of entrepreneurial process (what is the business idea, the internal and external sources of business ideas, techniques, ideas creation, business ideas protection). The process of transforming ideas into business. Necessary research conditions in the external and internal environment (clients, suppliers, markets, competition, resources, etc..). Implementation and control of the implementation process of business idea. Standard problems of starting business and ways of overcoming problems (organization, financing, research market conditions, teamwork, legal aspects). Directions of change (internal and external influences on corporate performance) criteria for the development of entrepreneurial ventures. Impact of the external environment (specific environments, institutions, legal and regulatory framework, funding). The importance and challenges of entrepreneurship, entrepreneurial types (corporate, internal, family), and new business models that encourage entrepreneurship, best practice).

#### 4. Teaching methods:

Teaching activity comprises lectures, exercises, consultations, consideration of specific problems in the field of entrepreneurship. Lectures partly delivered by the owners of successful small and medium-sized enterprises and representatives of the clusters and institutions important to encourage entrepreneurship. Presentation of seminar papers. Practical classes - exercises on practical examples, case studies and problem solving.

4. Teaching methods:									
4. Teaching methods: Bachelor Thesis mentor sets the Bachelor Thesis problem and gives it to the student. The student is obliged to write the Bachelor Thesis within the given topic defined by the Bachelor Thesis problem. During writing the Bachelor Thesis, mentor can give additional instructions to the student, suggest certain literature and additionally guide him with an objective to create a quality Bachelor Thesis. Within the theoretical part of the Bachelor Thesis, the student has consultations with the mentor, and with other professors dealing with problems in the field of the Bachelor Thesis topic, if needed. Within the given topic, the student executes certain measurements, testing, counting, questionnaires and other research, if necessary. The student writes the Bachelor Thesis and gives the bounded examples to the board after gaining consent from the board for assessment and defense. Defense of the Bachelor Thesis is public and the student is obliged to orally answer the questions and objections

#### Study Programme Accreditation

UNDERGRADUATE ACADEMIC STUDIES

Safety at Work

Standard 06. Programme Quality, Contemporaneity and International Compliance

The study programme of the undergraduate academic studies is in accordance with the modern world trends and the profession and sciences and it is comparable to the similar programmes at international university institutions, especially within the European educational framework.

The study programme is in accordance with the European standards in the sense of enrolment conditions, level and duration of education of Occupational Safety Engineering, conditions of advancing to the next year, as well as the way of acquiring the diploma. It is evident that the study programme contains proportionally similar share in academic-educational, theoretical-methodological, scientific-professional, professional-applicative and elective courses when compared to the contents of other institutions. Students of the Faculty of Technical Sciences spend proportionally equal time in direct practice like the colleagues educating themselves for the same profile abroad. Although the professional practice is less present during the first semesters of study, it is gradually intensified and is mostly present in the part of the programme consisting of the professional applicative disciplines, thus connecting scientific knowledge from the previous fields and professional skills and professional practice. In the same way, students of the Faculty of Technical Sciences face the same requirements as the students from other similar international institutions when it comes to the scope, quality and duration of writing the bachelor thesis. #### Study Programme Accreditation

UNDERGRADUATE ACADEMIC STUDIES

Safety at Work

Standard 07. Student Enrollment

Each year a certain number of students are enrolled to the Faculty of Technical Sciences on the undergraduate studies of Occupational Safety Engineering, in accordance with social needs and infrastructure resources, either at the budget financing or self-financing, which is annually defined by special decision of Scientific Educational Council of the Faculty of Technical Sciences. Student selection, from the list of applied candidates, is carried out based on the success during previous education and success at the enrolment examination defined by the Regulations of Student Enrolment to the Study Programmes.

Students from other study programs as well as persons who have completed studies may be enrolled to the study program of Occupational Safety. In this respect, the evaluation committee (comprising of the heads of all departments involved in realization of the study program) evaluates all passed activities of candidates for enrollment on the basis of all recognized number of points determined by the year of study in which the student can be enrolled. Hence, the passed activities can be recognized in full, can be recognized in part (Commission may require the proper supplement) or they may not be recognized at all.

#### Study Programme Accreditation

UNDERGRADUATE ACADEMIC STUDIES

Standard 08. Student Evaluation and Progress

The final grade in each course included in this programme is formed by continual monitoring of students` accomplishments throughout the academic year and by passing the final examination.

Students master the study programme by taking examinations and thus obtaining a certain number of ECTS credits, in accordance with the study programme. Each course within the programme is worth a certain number of ECTS credits which students obtain by successfully passing the course examination. The number of ECTS credits is based on the quantity and quality of work students are required to submit during a certain course and on the Faculty of Technical Sciences` unique methodology for all study programmes. Students` success in mastering a certain course is constantly monitored during classes and is expressed in points. Maximum number of points obtained in a course is 100.

Students obtain points from a course through their work during classes, completion of the prerequisites and taking the examination. The minimum number of points a student can obtain by fulfilling the course prerequisites during classes is 30, and the maximum 70.

Each course at the study programme has a clear and transparent mode of obtaining points. There are several ways students can obtain points: by participating in different activities during classes, by fulfilling the course prerequisites and by passing the course examination.

The final success of students at a course is presented with a grade 5 (failed) to 10 (excellent). The student's grade is based on the overall number of points obtained on fulfilling prerequisites and taking the examination, and in accordance with the quality of acquired knowledge and skills.

In order to take the final examination in the certain course, it is necessary that the student obtains at least 15 points in the examination prerequisites. Additional conditions for taking the examinations are defined individually for each course.

Advancement of students during education is defined by the Rules of Studying at the Undergraduate Academic Studies.

Study Programme Accreditation

Safety at Work

Standard 09. Teaching Staff

For the realization of the study programme in Occupational Safety Engineering, there is teaching staff with necessary professional and scientific qualifications.

The number of teachers engaged in the realization of the study programs of undergraduate and graduate academic studies meets the requirements of the study program and depends on the number of courses and number of classes on these courses. The total number of teachers is sufficient to cover the total number of hours on the study program, so that the teacher has about 180 hours of active lecturing (Lectures, consultations, exercises, practical work, ...) annually, or 6 times a week. Out of the total number of necessary teachers, one teacher is with 5% of working time, five teachers are from other faculties within the University of Novi Sad, one from master and doctoral studies has been retired (according to the law, two years more at master`s and doctoral studies). Other teachers are full-time employed.

The number of associates meets the requirements of the study program. The total number of associates on the study program is sufficient to cover the total number of hours in the study programme Occupational Safety Engineering, so that the associates make an average of 300 hours of Practice per year, that is, 10 hours per week.

Scientific and professional qualifications of the teaching staff match the educational and scientific field and level of their assignments. Each teacher has at least five references in the specific scientific or technical field, which is related to his teaching activities at the particular study program.

The group size for the lectures is up to 180 students, for exercises up to 60 students, and for labs up to 20 students.

All data on teachers and associates (CV, elections for the position, references) are available to the public.

Magi	ster thesis		1977	Faculty of Agricultu	ure - N	lovi Sad		Motor Vehicles	
Bach	elor's thesis	5	1971	Faculty of Mechani	ical Er	ngineering - No	ovi Sad	Motor Vehicles	
List o	of courses b	eing he	ld by the tea	acher in the accredite	ed stu	idy programme	s		
ID Course name				Study pro	ogramme name, study type				
1.	H2402	Motor	Vehicle Me	chatronics			(H00) Mechatronics, Undergraduate Academic Studies		
2.	M2404A	A Motor Vehicles						chanization and Construction Engineering, uate Academic Studies	
2	Maga	Funda	montolo of	Matar \ /abialaa				chanization and Construction Engineering, luate Academic Studies	
3.	M303	Funda	mentals of	Motor Vehicles				chnical Mechanics and Technical Design, luate Academic Studies	
4.	M310A	Road	Vehicle The	eory			(M20) Mechanization and Construction Engineering, Undergraduate Academic Studies		
5.	S0I361	Road Vehicles				( S00) Traffic and Transport Engineering, Undergraduate Academic Studies			
6.	ZR403A	Motor vehicles operation safety					(Z01) Safe	ety at Work, Undergraduate Academic Studies	
7.	M2515	Motor Vehicle Simulation and Modelling				(M22) Mechanization and Construction Engineering, Master Academic Studies			
8.	M2549	ROAD TRAFFIC FORENSIC ENGINEERING				G	(M22)Mea	chanization and Construction Engineering, Master Studies	
9.	LIM14	Monito	oring and Di	agnostics of Transpo	ortatio	n Means	( LIM) Logistic Engineering and Management, Master Academic Studies		
10.	H797	Mecha	tronics in m	nechanization - advar	inced t	topics	(H00) Mechatronics, Master Academic Studies		
Rep	oresentative	reffere	nces (minin	num 5, not more than	n 10)				
1.	Časnji F:	Ergono	mski nedos	taci poljoprivrednih tr	raktor	a, Monografija	, Fakultet te	hničkih nauka, Novi Sad, 1991, str.157.	
2.			D: Pregled e		eristika	a traktora velike	e snage, Mo	onografija povodom 30 godina izdavanja časopisa	
3.					traktor	ra, Traktori i po	gonske ma	šine, 13 (2008)4, Novi Sad 54-59	
4.								Fakultet tehničkih nauka - Novi Sad, 2009, str.	
5.				Interaction Between azi, Vol. 1, pp. 295-37				bin, in: Heat transfer Phenomena and	
6.	Časnji F:	Smanje	nje potrošn		ehatro	-		iji traktora, poglavlje u monografiji "Aktuelni pravci	
7.								ke povećanjem akustičke apsorpcije, Zbornik c, 2004, str. 352-360.	
8.				ić V: Savremene tene 2001.god. str.80	idencij	je u automobils	skoj tehnici -	- mehaničke komponente i elektronski sistemi,	
9.	Milidrag S Novi Sad			ravić V., Poznanović	: N.: S	istemi upravlja	nja motornił	h vozila, monografija, Fakultet tehničkih nauka,	
10.				ig S.: Stanje i pravci i ašinstvo za XXI vek",				a, monografija naučne konferencije sa

#### Study Programme Accreditation

UNDERGRADUATE ACADEMIC STUDIES

Safety at Work

Standard 10. Organizational and Material Resources

To perform the study programme, the adequate human, spatial, technical and technological, library and other resources suitable to the study programme features and predicted students` number are provided. Classes on the study programme Occupational Safety Engineering are held in such a manner so the minimum of 2 m2 of space is provided per student.

Lectures are held in amphitheatres, classrooms, computer and specialized laboratories. The library has over 100 bibliographical units relevant for the study programme Occupational Safety Engineering. There is also adequate equipment for all courses with the appropriate textbook literature, devices and supplementary equipment available on time and in a sufficient number for normal performance of the teaching process. Thereby, the adequate information technology is also available for performing the study programme and the materials from the lectures and practice as well as the use of lecturing material is available at the faculty website http://www.ftn.uns.ac.rs/\_data/nastava).

Faculty has the library and the study room and provides a seat for each student in amphitheatres, classrooms and specialized laboratories.

FACULTY OF TECHNICAL SCIENCES 21000 NOVI SAD, TRG DOSITEJA OBRADOVIĆA 6

### Study Programme Accreditation

Safety at Work

UNDERGRADUATE ACADEMIC STUDIES

Standard 11. Quality Control

The quality control of the study programme is performed regularly and systematically through selfevaluation and external quality control. The Faculty of Technical Sciences has experience in making students` questionnaires for several decades.

Quality checks of curriculum are being implemented through:

- students`questionnaires at the end of the teaching process in respect of the given course.

- graduates questionnaires on the occasion of receiving diplomas, regarding the quality of curriculum and logistic support of studies, place of studies (cleanness and tidiness of classrooms, hygiene nodes, ...)

- Students`questionnaires during the academic year validation .

- Students questionnaires when enrolling the academic year. The students then assess the degree program

which they ended in the previous year.

- questionnaires of the teaching and administrative staff on the quality of curriculum and logistics that are supporting the studies. In this questionnaire, the Dean, student services, libraries, and other departments of the Faculty are evaluated.

Study program quality monitoring is done through a Commission consisting of the department heads who participate in the implementation of a program, and one student representing each year of the study.
