Study Programme Accreditation - PhD Studies

Geodesy and Geomatics

DOCTORAL ACADEMIC STUDIES

Standard 00. Higher Education Institution Competence for the Implementation of PhD Studies

The Faculty is fully prepared in terms of academic staff, classroom capacity and other facilities for administering doctoral studies in all the fields studied at the Faculty based on indicators related to scientific and research work. The Faculty has a short-term and long-term plan and is accredited as a scientific and research institution, as required by law.

The ability of the Faculty to administer doctoral studies can be indicated by the following criteria:

- •The number of Ph.D. and Master theses defended at the higher education institution, which are in the area for which the study programme is accredited, in terms of the ratio of the doctoral and master theses and the number of students who have graduated from the programme and the number of professors.
- •The ratio between the number of professors and the number of professors involved in scientific and research projects.
- •The ratio between publications in the Ministry of Science acclaimed international journals in the last 10 years and the number of professors.
- •Cooperation with institutions in the country and abroad

The Faculty employs a number of tenured teachers who have acted as doctoral thesis supervisors.

The capability of the Faculty to administer doctoral studies is obvious from the references which are enclosed with the accreditation material.

FACULTY OF TECHNICAL SCIENCES 21000 NOVI SAD, TRG DOSITEJA OBRADOVIĆA 6

Study Programme Accreditation - PhD Studies

Geodesy and Geomatics

Standard 01. Programme Structure

Head of Doctoral Studies at the Faculty.

DOCTORAL ACADEMIC STUDIES

The name of the study programme of Doctoral academic studies is Geodesy and Geomatics. The acquired academic degree is a Doctor of Science - Geodesy (Ph.D.). The final outcome of the learning process is development and improvement of the knowledge obtained during the previous cycle studies, which enables students to become capable of independent scientific research.

Doctoral academic studies in Geodesy and Geomatics last for three years and they are worth at least 180 ECTS. Out of it, 90 ECTS is obtained through examination at the subjects, 30 ECTS is obtained by taking theoretical basis for doctoral dissertation, and 60 ECTS is acquired by elaborating and defending the doctoral dissertation. Doctoral studies cannot last longer than 10 years.

Research study on Theoretical Bases on a Doctoral Dissertation presents a qualifying examination for the preparation of a doctoral dissertation in which students demonstrate that they have mastered necessary theoretical knowledge in the scientific areas of interest. Theoretical Bases are taken as an examination (written and / or oral) by topics (issues) from at least three teaching courses at the study programme. Doctoral studies are organized through lectures, research study, research work, elaboration and defence of the doctoral dissertation. Student's research interest is profiled by selecting teaching subjects which will be studied and taken; and thus, contributing to their in-depth knowledge and understanding of areas (themes) of their doctoral dissertation. Optional subjects are selected from the group of proposed subjects on the study programme, though students have the possibility, according to their abilities and wishes and with the agreement by their mentor (co-mentor), to select a certain number of courses from the proposed courses at the Faculty of Technical Sciences, University of Novi Sad, or some other university in the country and abroad. In doing so, the prerequisites determined for taking an optional course have to be fulfilled. Teaching activity for the subjects (compulsory or optional) is group or individual (mentoring) activity. Group classes are held if the subject was chosen by five or more students or if this type of lecturing is necessary to be organized due to the nature (character) of the subject. The decision on the type of instruction and optional subjects that will be taught is made by the Head of Doctoral Studies eith the agreement by the

Standard 02.

FACULTY OF TECHNICAL SCIENCES 21000 NOVI SAD, TRG DOSITEJA OBRADOVIĆA 6

Study Programme Accreditation - PhD Studies

Geodesy and Geomatics

DOCTORAL ACADEMIC STUDIES

Programme Objectives

The purpose of the Study Programme is the education of students capable of high quality and independent scientific research in accordance with the needs of society. On the other hand, educating staff trained to critically evaluate research work and independently carry out original and scientifically relevant research enables the development of new technologies and procedures that contribute to the overall development of society. In addition, the purpose of this Doctoral Study Programme is a contribution to national science as well.

Study Programme of Doctoral Studies in Geodesy and Geomatics is designed to provide the acquisition of skills that are socially justified and useful. Faculty of Technical Sciences has defined tasks and goals for educating highly competent personnel in the field of technology. The purpose of the Study Programme of Geodesy and Geomatics is completely in accordance with the objectives and goals of the Faculty of Technical Sciences.

FACULTY OF TECHNICAL SCIENCES 21000 NOVI SAD, TRG DOSITEJA OBRADOVIĆA 6

Study Programme Accreditation - PhD Studies

Geodesy and Geomatics

Standard 03. Programme Goals

DOCTORAL ACADEMIC STUDIES

The objective of the study programme is to achieve student's scientific competencies and academic skills in the field of Geodesy and Geomatics. This also includes the development of creative abilities in considering problems and the ability of critical thinking, the development of teamwork skills and the mastering of specific practical skills necessary to perform the profession.

The objective of the study programme of doctoral studies is to educate an expert who has sufficient extended knowledge consistent with contemporary directions of development of science in the world. One of the specific objectives which is in accordance with educational aims of experts at the Faculty of Technical Sciences is to develop students` awareness of the need for a personal contribution to the development of a society in general and the environmental protection. The objective of the study programme is also the education of experts in the field of teamwork, and the development of technical capacity for communication and presentation of their original results to scientific public.

FACULTY OF TECHNICAL SCIENCES 21000 NOVI SAD, TRG DOSITEJA OBRADOVIĆA 6

Study Programme Accreditation - PhD Studies

DOCTORAL ACADEMIC STUDIES Geodesy and Geomatics

Standard 04. Graduates' Competencies

PhD graduates of the academic study programme in Geodesy and Geomatics are competent to conduct research and solve problems in real life practice activities. Competencies include, above all, the development of critical thinking skills, problem analysis capabilities, synthesis solution, predicting the behaviour of selected solutions with a clear representation of what is good and what is bad by the selected solution.

Qualifications that indicate the completion of doctoral academic studies are gained by students:

- •who have demonstrated systematic knowledge and understanding in the field of civil engineering that complements the knowledge gained at graduate academic studies, being the basis for developing critical thinking and application of knowledge;
- •who have mastered the skills and methods of research in the field of civil engineering;
- •who have shown the ability of making concepts, design and application
- •who have shown ability to adapt the research process with the necessary level of academic integrity;
- •who have performed original research and work, extending the boundaries of knowledge, which is verified by publishing papers in the appropriate scientific journal and by the references in national and international levels:
- •who are capable of critical analysis, evaluation and synthesis of new and complex ideas;
- •who are capable of knowledge and ideas transfer to their colleagues, wider academic community and society in general
- •who are capable of promoting technological, social and cultural progress in the academic and professional environment

After graduation, PhD programme allows students to have the knowledge, skills, developed abilities and competencies to :

- •independently solve practical and theoretical problems and organize and realize developing activities and research:
- •be involved in international scientific projects
- •be able to implement the development of new technologies and procedures in the field of civil engineering and to understand and use modern knowledge;
- •think critically, work creatively and independently;
- •respect the code of ethics and principles of good scientific practice;
- •be capable to present scientific research results at scientific conferences and publish in scientific journals, verifying them through patents and new technical solutions;
- •contribute to the development of scientific disciplines in science generally.

After this study programme completion, the student obtains the following subject-specific competences:

- thorough knowledge and understanding of the disciplines that are the subject of their involvement;
- ability to solve problems using scientific methods and procedures;
- linking basic knowledge in various fields and their application;
- •ability of modern developments in the field of profession;
- necessary skills and ability in applying knowledge in the field of civil engineering;

Students who obtain their Doctoral degree in Geodesy and Geomatics acquire knowledge on how to economically utilize natural resources in accordance to the principles of sustainability.

Special attention is attributed to develop abilities for the teamwork and the development of professional ethics.

The acquired competences have to be verified in scientific papers. Prior to obtaining the qualifications on the completed studies, students have to publish (or prove that the papers are accepted for publishing) at least 2 (two) papers in the scale R54 (according to the categorization of the Ministry of Science) and at least one paper in the SCI list journal.

FACULTY OF TECHNICAL SCIENCES 21000 NOVI SAD, TRG DOSITEJA OBRADOVIĆA 6

Study Programme Accreditation - PhD Studies

Geodesy and Geomatics

Standard 05. Curriculum

DOCTORAL ACADEMIC STUDIES

The curriculum of the Doctoral Academic Study Programme in Geodesy and Geomatics is made to meet the set goals. The structure of the study programme enables the students to choose optional courses which will be worth at least 70% of ECTS credits.

During the course of the doctoral academic studies students are encouraged to specialize in the specific field of study they are most interested in. Through elective courses they are able to take further interest in the scientific and research areas studied during the course of their graduate academic studies.

All courses last one semester and are worth a certain number of ECTS credits, one credit comprising approximately 30 hours of a student's activity.

The curriculum defines every course of the study programme which states the following: the course name, type, the year and semester when the course is lectured, the number of ECTS credits, the name of the lecturer, the course objective with the expected outcome, the knowledge and competences the student will acquire, the prerequisites for taking the course, the course content, the recommended literature, the methods of lecturing, the knowledge tests and evaluation, and other data.

The study programme is created in accordance with the European standards concerning the enrolment requirements, the duration of studies, the terms of enrolling into the next year of studies, the acquisition of a diploma and the mode of study.

The curriculum enables students to attend 9 courses during the first three semesters. During the first semester there is one compulsory course (Methods of Scientific Research) and two elective courses. During the second and third semester (each one having two elective and one obligatory course), students elect elective courses after consulting their co-mentor, one being available to every student of the doctoral studies

The doctoral studies are worth no less than 180ECTS. Out of this, at least 90 ECTS are obtained by passing the course examinations assigned by the study programme, and 90 ECTS are obtained by passing the theoretical basis for Doctoral dissertation the elaboration and defence of Doctoral dissertation.

The research study of the theoretical framework of a doctoral dissertation is completed by passing an examination which proves that the student has acquired the necessary theoretical knowledge in the chosen field of study. Passing this examination enables the student to continue the doctoral studies. The theoretical framework has to be taken as an examination (either written and/or oral), divided into chapters (questions) in at least three courses of the study programme.

The doctoral studies within a specific study programme last at least 3 (three) academic years (6 semesters), and their longest duration is 10 academic years.

The doctoral studies involve classes, scientific and research work and the completion and defence of a doctoral thesis.

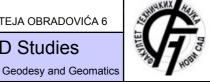

The course lectures (compulsory and optional) are carried out either through group or individual work (with a mentor). Group lectures are necessary if more than ten students are taking a particular course, or if the nature of the subject (the course) requires group work.

The decision on the type of lectures and optional courses to be organized is made by the Head of the Doctoral Studies in compliance with the Study Programme Quality Committee.

Numerical Methods of Linear Algebra. 26. Fuzzy Sets. 27. Economic and Financial Mathematics. 28. Groups and Algebras Li. 29. Formal Languages and Automata Theory. 30. Process Algebras. 31. History of Mathematics. Part of the course is in the form of independent research and study in the field of mathematics. Study and research work is based on primary scientific sources, organization and conduction of experiments and statistical data analysis, numerical simulations, and possible paper in the field of mathematics.

4. Teaching methods:

Lectures. (The student can choose in consultation with supervisor, one or more modules depending on module scope). Consultations. Lectures are organized in combined form. The presentation of the theoretical part is followed by the corresponding examples which contribute to better understanding of the theoretical part. In addition to lectures there are regular consultations. Through research and study work the student will, on the bases of scientific journals and other relevant literature that has been studied independently, develop further understanding of the material covered in lectures. Working with the course teacher the student develops the ability to independently work on a scientific paper.

The presentation of the theoretical part is followed by the corresponding examples. In addition to lectures there are regular consultations. Through research and study work the student will, on the bases of scientific journals and other relevant literature that has been studied independently, develop further understanding of the material covered in lectures. Working with the course teacher the student develops the ability to independently work on a scientific paper.

Course:	

Course id: SID04 Current State in the Field
Number of ECTS: 2

Teachers: Atanacković M. Teodor, Katić A. Vladimir, Kulić J. Filip, Vilotić Ž. Dragiša

Course status: Mandatory

Number of active teaching classes (weekly)

Lectures: Practical classes: Other teaching types: Study research work: Other classes: 0 0 0 0 2 0

Precondition courses None

1. Educational goal:

Introducing students to the current research directions and manners in solving problems from the wider study field.

2. Educational outcomes (acquired knowledge):

Knowledge on the current research directions worldwide in the field, based on lectures by prominent professors from the universities in Europe or prominent experts from the well-known companies abroad.

3. Course content/structure:

Contemporary topics in the field of research, presented by prominent professors and experts on lectures on invitation. Students select topics or attend lectures as they wish or as they find the topic interesting.

4. Teaching methods:

Survey on solving contemporary problems by theoretical methods and multimedia presentations.

1. Educational goal:

To acquire basic and applied knowledge in the field of Geodesy, Geomatics, and Geoinformatics. To acquire general and applied knowledge in the field of photogrammetry and remote detection.

2. Educational outcomes (acquired knowledge):

Acquired knowledge is used in professional courses, as well as in the recognition and solving the engineering problems.

3. Course content/structure:

Photogrammetric scanners. Construction. Geometric radiometric quality. Geometric and radiometric rectification of the images. Software analysis. Digital photogrammetric systems. Principles. Components. Photogrammetric functions. Software. Automated digital aerotriangulation. Automated measuring of the digital height model. 3D structure extraction. Orthophoto production. Introduction to remote detection. Technological bases. Sensor platforms. Interpretation of sensor information. Image preprocessing. Image transformations. Filtering. Interpretation methods in remote research. Subjective interpretation, characteristics and boundaries. Interactive interpretation with partially automated functions. Emphasizing, ranging and reducing the amounts of markings. Classification. Segmentation. Algorithms for classification and segmentation. Registering and geocoding. Merging the images. Quality control and accuracy evaluation. Software tools for remote detection.

Precondition courses			None								

1. Educational goal:

To acquire theoretical and practical fundamentals in the science on system management.

2. Educational outcomes (acquired knowledge):

Acquired knowledge can be used in solving specific engineering problems and they also present a basis for further knowledge in professional courses.

3. Course content/structure:

Basic terms and principles of the automated control systems. Mathematical descriptions of continual linear and nonlinear systems. Evaluation of the management quality in stationary and transit regime. Analysis on the system stability using analytical methods. Concept of the system condition space. Selection and adjustment of parameters of industrial regulators: PID regulator. Elements of digital control systems. Introduction to computer (PLC) application in control.

Automated elements in the robotized total station, characteristics, working modes and management. Automation of geodesic measurements and data transfer in the domain of precise agriculture.

Automation of geodesic measurements and data transfer in the applications for construction machinery. Automation of geodesic measurements and data transfer in the applications for vehicle monitoring. Automation of geodesic measurements and data transfer in the applications for transport control at the airports.

Introduction to SAR technology.

1. Educational goal:

To acquire basic and applied knowledge in the field of Geoinformatics and Geoinformation Systems. To learn students for spatial planning with landscape arrangement at the level of macro-urban areas.

2. Educational outcomes (acquired knowledge):

Acquired knowledge is used in professional courses, as well as in the recognition and in solving the engineering problems.

3. Course content/structure:

Fundamentals in the spatial planning systems Objective of spatial planning Legal regulative Documents and measures for spatial arrangement Properties and content of the documents for spatial arrangement Sources and data gathering for spatial planning Landscape arrangement Expropriation, reallocation, commassation Roles of geodesic activities in gathering, processing and handling information on space and land

4. Teaching methods:

Lectures. Seminar papers. Consulations. Study and research.

1. Educational goal:

To acquired basic and applied knowledge in field of Geodesy, Geomatics and Geoinformatics. To acquire general and applied knowledge in the field of deformation measurements and analysis.

2. Educational outcomes (acquired knowledge):

Acquired knowledge is used in professional courses, in the recognition and in solving the engineering problems.

3. Course content/structure:

?Fundamental measuring procedures in monitoring deformations

?Organization of the programme for deformation reserach

?Project in homogeneous observation system and the selection of measuring points

?Measuring plan and programme

?Optimal measuring accuracy and economy

?Monitoring deviations and deformations using automated measuring systems

?Deformation analysis

?Statistic parameters, tests, classifications – introduction to deformation analysis

?Hystograms and frequency polygons for measuring errors. Deformation models (schools)

?Hannover model

?Karlshrue model

?Functional and stochastic standardization models

?Data Snooping method. Variation homogenity

?Global analysis

?Deviation localization

?Interpretation of measuring results

?Movement approximation for individual measuring point in a structure

?Correlation between deviations of individual structure points

?Total structure deformation

?Result survey

1. Educational goal:

To aquire basic and applied knowledge in the field of Geodesy, Geomatics and Geoinformatics. To acquire general and applied knowledge in the field of terrain surveys and integral surveying systems.

2. Educational outcomes (acquired knowledge):

Acquired knowledge is used in professional courses, in the recognition and in solving the engineering problems.

3. Course content/structure:

Advanced methods in measuring by GPS, differential (DGPS) and real-time kinematic (RTK) surveying. Determination methods and techniques for searching ambiguities (least square method, variance-covariance, FASF, Lambda method, etc) for both phase and the combination of code and phase data. Plans for developing GPS and the advantages provided by the new possibilities in the sensor integration and geomatics.

Basic principles and prerequisites for sensor integration, advantages following the integration. Sensor characteristics applied in the integration for geodesic and geoinformation purposes (GPS, inertial systems, remote detection sensors, odometers and gyroscopes). Algorithms for sensor integration. Integration of GPS and GIS. Integration of sensors for non-geodesic purposes. Geomatic approach to sensor integration, definition of the integrated sensor space, problems in data acquisition and quality.

4. Teaching methods:

Lectures. Seminar papers. Consulations. Study and research.

1. Educational goal:

The application of fundamental, theoretical and methodological, scientific and professional, and professional and applicative knowledge, methods and contemporary knowledge from the magazines from the SCI list in order to solve concrete problems within the courses at Doctoral studies.

2. Educational outcomes (acquired knowledge):

Enabling students to individually connect the contents from the courses at Doctoral studies, apply previously acquired as well as new knowledge for observing the structure of the set problems and its systematic analysis in order to elaborate conclusions on possible directions in its solving. Through individual usage of literature, students broaden their knowledge and utilizing new methods individually and creatively, they use new knowledge in solving the set problems.

3. Course content/structure:

It is formulated individually in accordance with further research. Students read scientific literature, and perform analyses in order to find solutions for a concrete task which is defined by setting the task on the side of the supervisor and other lecturers at Doctoral studies. Theoretical bases present a classification examinations. Students are prepared to take the classification examination.

4. Teaching methods:

Student's co-supervisor sets the seminar paper task and delivers it to the student. The student has the obligation to elaborate the paper within the set theme defined by the paper task, utilizing the literature proposed by the co-supervisor. During the paper elaboration, the co-supervisor can provide additional instructions to the student direct them to certain literature and additionally direct them towards the elaboration of a quality paper. During the study research work, the student has tutorials with the co-supervisor and course lecturers, and if needed, with other lecturers dealing with the problems in the field of the set paper task. Within the set theme, the student can also perform certain measuring, research, calculations, surveys and other researches, statistic data processing, if it is necessary for the task. After the defence of the paper, the candidate has to pass the oral examination in the field of the passed examinations, in front of a committee. If the examination is

1. Educational goal:

The application of fundamental, theoretical and methodological, scientific and professional, and professional and applicative knowledge and methods in solving concrete problems within the selected field. In this segment of Doctoral dissertation, students investigate the problem, its structure and complexity and on the basis of the performed analyses draw conclusions on possible manner in its solving. Researching the literature, students are introduced to methods attended for creative solving of new tasks and the engineering practice in their solving. The objective of students' activity within this segment of research is to acquire necessary experience through solving complex problems and tasks and recognizing the possibility for applying previously acquired knowledge in practice.

2. Educational outcomes (acquired knowledge):

Enabling students to individually apply previously acquired knowledge from diverse areas already studied in order to observe the structure of the set problem and its systematic analysis for drawing conclusions on possible directions in its solving. Through individual usage of literature, students broaden their knowledge from the selected field and they investigate diverse methods and papers related to the similar fields. Thus, students develop the competence to perform analyses and identify problems within the set theme. Practical application of the acquired knowledge from diverse areas develops in students the ability to overview the place and the role of engineers in the selected field, the demand for cooperation with other professions and the team work.

3. Course content/structure:

It is formulated individually in accordance with the elaboration of the concrete Doctoral dissertation, its complexity and structure. Students read scientific literature, Doctoral dissertations by other students dealing with similar theme; they perform analyses in order to find solutions for a concrete task defined by the task of the Doctoral dissertation.

4. Teaching methods:

The supervisor of the Doctoral dissertation sets the dissertation task and delivers it to the student. The student has the obligation to elaborate the dissertation within the set theme defined by the Doctoral dissertation task, utilizing the literature proposed by the supervisor. During the elaboration of the Doctoral dissertation, the supervisor can provide additional instructions to the student direct them to certain literature and additionally direct them towards the elaboration of a quality Doctoral dissertation. During the study research work, the student has tutorials with the supervisor, and if needed, with other lecturers dealing with the problems in the field of the set dissertation task. Within the set theme, the student can also perform certain measuring, research, calculations, surveys and other researches, statistic data processing, if it is predicted by the task of the Doctoral dissertation.

1. Educational goal:

Acquiring knowledge about structure and form of writing the dissertation report after analysis, and other activities carried out within the assigned theme of Doctoral dissertation. By writing the Doctoral dissertation, students gain experience in writing papers within which it is necessary to describe the problem, implement methods and procedures and obtained results, as well as to give new scientific contribution to the science development and to the application of the scientific research in practice. In addition, the objective of writing and defense of the Doctoral dissertation is to develop student skills for independent paper preparation in a suitable form for the purpose of public presentation, as well as to respond to comments and questions related to the given topic.

2. Educational outcomes (acquired knowledge):

Training students for a systematic approach in solving the given problems, carrying out analyses, applying knowledge and accepting knowledge from other areas in order to find creative solutions for a given problem. Through independent studying and solving tasks in a given topic, they acquire the knowledge about the complexity of the problems in the field of their profession. Through elaboration of Doctoral dissertation, students gain certain experiences that can be applied in practice when solving problems in the field of their profession. The student acquires necessary experience on how to present the results of independent or team work in practice by preparing the results for public defense, by public defense, and by answering questions and complaints of the Commission.

3. Course content/structure:

It is individually formed in accordance with the needs and the field covered by a given Doctoral dissertation. In agreement with a mentor, a student makes the Doctoral dissertation in a written form in accordance with the rules provided by the Faculty of Technical Sciences. The student prepares and defends the written Doctoral dissertation in public, in agreement with the mentor and in accordance with the prescribed rules and procedures.

4. Teaching methods:

During the elaboration of the Doctoral dissertation, the student consults with his/her mentor, and if necessary with other teachers dealing within a sphere of the Doctoral dissertation. The student writes the Doctoral dissertation, and submits the bound copies to the Commission upon the approval of the Commission for assessment and defense. The Defense of the Doctoral dissertation is performed in public, and after the presentation, the student is obliged to orally answer the questions and comments.

Study Programme Accreditation - PhD Studies

Geodesy and Geomatics

DOCTORAL ACADEMIC STUDIES

Standard 06. Programme Quality, Contemporaneity and International Compliance

The study programme is consistent with the modern world's scientific developments and the status of the profession, and comparable to similar programmes in foreign higher education institutions.

The study programme in Geodesy and Geomatics is designed as complete and comprehensive and offers students the latest scientific and technical knowledge in this area, as well as follows the newest scientific achievements.

The study programme is formally and structurally consistent with the adopted subjects and specific standards for accreditation and conforms to European standards in terms of enrolment, length of study, conditions of transition to a following year, graduation and method of study.

The study programme is comparable and in accordance with the following:

Faculty for Civil Engineering and Geodesy, University of Ljubljana www2.fgg.uni-lj.si

KTH Royal Institute of Technology, Geodesy Division http://www.kth.se/?l=en_UK http://www.infra.kth.se/geo/search.html http://www.infra.kth.se/geo/education/postgraduate.html

Study Programme Accreditation - PhD Studies

Geodesy and Geomatics

DOCTORAL ACADEMIC STUDIES

Standard 07. Student Enrollment

In accordance with social needs and its resources, the Faculty of Technical Sciences enrols a number of students to the Doctoral Academic Studies in Geodesy and Geomatics either to the budget financing of studies or self-financing which is defined each year by a special decision of Educational-Scientific Council of the Faculty. The enrolment of the students to the doctoral studies is monitored by the Committee for Enrolment. Committee for Enrolment is membered by the head of the doctoral studies of the Faculty of Technical Sciences and heads of all study programmes for doctoral studies at the Faculty.

The first year of doctoral studies may be enrolled by a person who has:

- the completed undergraduate academic and graduate academic studies with at least 300 ECTS credits and grade point average not less than 8.00 on the undergraduate academic and graduate academic studies Master or equivalent grade from other rating systems, or if one belongs to 20% of the best students in the generation; or
- the academic title of Master of Science in the adequate scientific field and if the student has not obtained the PhD degree by earlier legislation within the period established by the law.

A person completing studies following the regulations valid before passing the Law on Higher Education, can enrol the Doctoral academic studies under the same conditions as a person obtaining the diploma on the completed academic studies – Master studies, under the condition that the diploma is equivalent to the diploma with at least 300 ECTS, proven by the certificate on equivalence.

Adequate graduation studies and scientific areas are determined individually for every study programme.

In some exceptional situations enrolment may be allowed to other candidates taking differential exams. The decision on taking differential exams including the character of differential exam is made by the Commission for the enrolment of the study programme. Based on the grade point average and studying duration, published scientific and professional papers, the Committee for enrolment makes a list of applied candidates. Committee for enrolment can make a decision on the organization of additional knowledge testing of candidates by taking the qualification exam.

In addition, the candidate is required to know world languages and to have IT skills which guarantee the smooth attendance of classes and the use of literature.

The passed examinations can be acknowledged or partially acknowledged to students of master studies or those with the master of science degrees whose knowledge was acquired by previously existing legislation with amendment which is done by the Commission for enrolment, provided that the candidate has not spent more than four (4) years on Master of science studies.

During enrolment, the student and the Faculty conclude an agreement on the rights and obligations during studies.

Study Programme Accreditation - PhD Studies

DOCTORAL ACADEMIC STUDIES

Geodesy and Geomatics

Standard 08. Student Evaluation and Progress

The final grade in each course included in this programme is formed by continual monitoring of students' accomplishments throughout the academic year and by passing the final examination.

Students master the study programme by taking examinations and thus obtaining a certain number of ECTS credits, in accordance with the study programme. Each course within the programme is worth a certain number of ECTS credits which students obtain by successfully passing the course examination. The number of ECTS credits is based on the quantity and quality of work students are required to submit during a certain course and on the Faculty of Technical Sciences` unique methodology for all study programmes. Students` success in mastering a certain course is constantly monitored during classes and is expressed in points. Maximum number of points obtained in a course is 100.

Students obtain points from a course through their work during classes, completion of the prerequisites and taking the examination. The minimal number of points a student can obtain by fulfilling the course prerequisites during classes is 30, the maximum is 70. Each course at the study programme has a clear and transparent mode of obtaining points.

The final success of students at a course is presented with a grade from 5 (fail) to 10 (excellent). The student's grade is based on the overall number of points obtained on fulfilling prerequisites and taking the examination.

For students to be able to take a course examination, they need to obtain at least 15 ECTS prerequisite credits during the semester. Additional requirements for taking the examination are defined separately for every course.

The studies at the study programme are being realized in the following manner:

The head of the study programme appoints a co-supervisor among the study programme stuff for every student upon the enrolment, and that person tutors the student until the selection of the supervisor. At the end of the semester, co-supervisors present a report to the head of the study programme on student's results on conducted researches and achieved results.

The prerequisite for enrolling the second year of studies is for the student to obtain at least 30 ECTS credits during the first study year with the relative grade point average (R) at least 8.00 (eight point zero zero). Relative grade point average is calculated based on the ratio between the grade and the number of credits attributed to the course (the formula can be found in the rules of studying at the Faculty of Technical Sciences).

Students who do not fulfil the prerequisite for enrolling the second year, and obtain at least 15 ECTS credits, have the possibility to continue their studies at the specialist academic studies, taking the results obtained.

The right to pass the qualification examination for the elaboration and defence of the Doctoral dissertation (Study and Research and Theoretical Bases for Doctoral Dissertation) is attributed to the student who completed the second year of studies and passed all the examinations in the study programme curriculum during the period of at the most 3 (three) years since the enrolment with the relative grade point average of at least 8.00.

Students who do not fulfil the requirement for passing the Theoretical Bases for the Doctoral Dissertation have the possibility of taking their passed examinations and continuing their studies at the specialist academic studies.

The research study on the Theoretical Bases for the Doctoral Dissertation is a qualifying examination the student has to pass before they are allowed to start writing the doctoral thesis. Theoretical bases are taken as an examination (oral and/or written) in the fields (questions) from at least three courses from the study programme. The list of fields (questions) for taking the qualification examination are provided for the student by the head of the study programme at doctoral studies upon request in the time period of 14 days from receiving the request. Qualification examination has to be taken in front of a committee of at least three members, stated by the head of the doctoral studies at the Faculty. Theoretical Bases for the Doctoral Dissertation can be taken no sooner than 30 days after passing the final examination and no longer than 12 months after passing the final examination.

An examination at doctoral studies can be taken three times the most. The final part of the doctoral dissertation is the elaboration and the defence of the Doctoral Dissertation.

FACULTY OF TECHNICAL SCIENCES 21000 NOVI SAD, TRG DOSITEJA OBRADOVIĆA 6

Study Programme Accreditation - PhD Studies

Geodesy and Geomatics

Standard 09. Teaching Staff

DOCTORAL ACADEMIC STUDIES

For the realization of the study programme in Geodesy and Geomatics, there is teaching staff with necessary professional and scientific qualifications, verified by the list of scientific papers and data on participation in national and international scientific and research projects. At least half of teachers participate in scientific and research projects. Teachers' competence is determined on the basis of scientific papers published in international magazines, where at least one paper has been published or accepted to be published in a magazine from the SCI list; scientific papers published in national magazines; papers published in proceedings from international scientific conferences; monographs; patents; textbooks; new products or significant improvements on the existing products.

The supervisor has at least five scientific papers published or accepted to be published in scientific magazines on the given field. It has been established that a supervisor cannot lead more than five Doctoral dissertation candidates simultaneously.

The number of teachers coincides with the demands of the study programme and depends on the number of courses they lecture and the number of classes at these courses. The total number of teachers is sufficient to cover the total number of classes on the study programme, so each teacher has an average of 180 active classes (lectures, tutorials, practice classes, field classes) per year, i.e. 6 classes per week. Out of the total number of necessary teachers, all 100% are full time employed. A minimal number of teachers participating in the given study programme with full time employment is five.

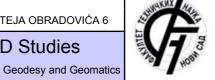

Scientific and professional qualifications of the teaching staff relate to the educational and scientific field and the level of their participation. Each teacher has at least 10 references from the narrow scientific or professional field in which they lecture on the study programme.

No teacher has more than 12 classes per week. All data on teachers and assistants (CV, selections, and references) are available to the public.

Study Programme Accreditation - PhD Studies

Geodesy and Geomatics

DOCTORAL ACADEMIC STUDIES

Standard 10. Organizational and Material Resources

To perform the study programme, the adequate human, spatial, technical and technological, library and other resources suitable to the study programme features and predicted students` number are provided. Classes on the study programme Graphic Engineering and Design are held in 2 shifts, so the minimum of 2 m2 of space is provided per student.

To perform the study programme, the adequate space for lecturing is provided, as well as the adequate laboratory space necessary for the experimental work and the equipment based on contemporary information and communication technologies. Lectures are held in amphitheatres, classrooms and specialized laboratories.

Faculty provides the usage of the library fund from its own or other sources (books, monographs, scientific magazines, other periodicals) in the amount necessary for the Doctoral study programme. Doctoral study students have the access to databases necessary for Doctoral dissertation elaboration and scientific and research work.

The library possesses more than 100 library units relevant for the performance of the study programme. All courses from the study programme have adequate textbooks, devices and supplementary equipment available on time and in a satisfactory number for the normal teaching process. There is also adequate information support.

Faculty has the library and the study room and provides a seat for each student in amphitheatres, classrooms and laboratories.

Faculty has a short-term and a long-term plan and the budget for the realization of scientific and research work

Means for the realization of Doctoral studies, besides the ones provided by the resource ministries, are also provided in cooperation with other higher education institutions, accredited scientific institutions and international organizations.

Faculty provides students to utilize equipment or have access to necessary and adequate equipment in the possession of the Faculty, for scientific and research work.

Faculty provides students to utilize equipment or have access to the equipment necessary for scientific and research work on the basis of contracts on cooperation with other appropriate institutions.

Study Programme Accreditation - PhD Studies

Geodesy and Geomatics

DOCTORAL ACADEMIC STUDIES

Standard 11. Quality Control

Estimation of the study programme quality is elaborated regularly and systematically via self-evaluation and external quality control. One should place an emphasis on the multi-decade practice of students' surveys.

Study programme quality control is elaborated in the following manners:

- Surveying students at final lecture from the given course.
- Surveying students on the quality of the study programme and logistic support to the studies in the event of awarding the Diploma. Also, the studying comfort (classroom cleanness and tidiness) is evaluated there.
- Surveying students during the confirmation on completing a year of studies. Then students evaluate the logistic support to the studies.
- Surveying students on enrolling each year of studies. Then students evaluate the study programme at the year they completed in the prior academic year.
- Surveying the teaching and non-teaching staff on the quality of the study programme and the logistic support to the studies. This survey evaluates the work of the Dean's office, Registrar's office, library, and other services at the Faculty. Furthermore, the studying comfort (classroom cleanness and tidiness) is also evaluated.

To monitor the quality of the study programme, there is also a committee with all heads of all Departments participating in the realization of the study programme, together with a student from each study group. Additional quality is obtained by the obligatory scientific production of candidates. Prior to beginning the defence of the Doctoral dissertation, each candidate is obliged to publish at least 2 (two) papers in the R54 rank (following the categorization provided by the Ministry of Science) and at least one paper in the magazine from the SCI list.
