FACULTY OF TECHNICAL SCIENCES 21000 NOVI SAD, TRG DOSITEJA OBRADOVIĆA 6

Study Programme Accreditation

Standard 00. Introduction

The study program of Master Academic Studies of Power Software Engineering represents the continuation of the corresponding study program of Undergraduate Academic Studies. It has been formed on the basis of long-lasting development of the study programs of Power, Electronic and Telecommunication Engineering and Computing and Control Engineering at the Faculty of Technical Sciences in Novi Sad. It is the result of the need for more profound research of the problem of design and development of specialized software for systems representing the functioning base of the society in general and the need for providing the education to the research and science oriented people as a potential resource for the work in the field in question.

Power Software Engineering is the field of studies intended for students who are interested, within their future professional orientation, in developing software for planning, organization, managing, monitoring and control of power systems and who have special talents and tendency to cultivate their research competence in thefield in question.

Unlike the study programs dealing with the computer science in general, the Power Software Engineering applies a domain oriented approach with the intention to use the properties and problems of power systems as a context to introduce the advanced methods and techniques of software development. In this way, a detailed insightin the problems of software engineering in general is obtained, but at the same time, profound knowledge of the specifics of designing specialized software for power systems is acquired.

The study program of Power Software Engineering is a result of practical needs – lack in experts qualified for development of specialized software which has become a necessity in a well-functioning modern society. Thisstudy program at the level of Master Academic Studies provides the students graduated from the Undergraduate Academic Studies with the possibility, upon opting for the subjects of interest, to further their practical knowledge into skills necessary for the work in target area of application and to train to become research oriented professionals in their field of expertise.

FACULTY OF TECHNICAL SCIENCES 21000 NOVI SAD, TRG DOSITEJA OBRADOVIĆA 6

Study Programme Accreditation

MASTER ACADEMIC STUDIES Power Software Engineering

Standard 01. Programme Structure

The name of the study program is Power Software Engineering. The academic title earned is Master in Electrical and Computer Engineering. The outcome of the learning process is theoretical knowledge, practical skills and ability of analytical and synthetic thinking, providing Master Engineers of this professional orientation with the possibility of independent research work in their field of expertise. The application of such acquired knowledge and skills to the problems occurring in the field of expertise enables not only the successful professional activity, but also the continuance of education at the level of doctoral studies.

Requirements for the enrolment in the study program are the graduation from Undergraduate Academic Studies in the corresponding field and passing of the entrance exam which carries 60 points and the exam is considered passed if the candidate gained at least 14 points.

All the subjects at one-year Master Academic Studies of Power Software Engineering are optional and enable students to shape their studies in a specific way, according to their personal inclination and wishes.

The teaching methods are lectures, auditory, calculation and computer practice. Special forms of teaching activities are homework, seminar papers, projects – all intended for the practical case studies in the corresponding research field. Special attention is paid to individual work with students in the form of mentoring activities and consultations. The number of acquired ECTS is formulated on the basis of a unique methodology and shows the engagement of students in all forms of teaching activities. Studies are considered finished when a student fulfills all its obligations prescribed by the study program, passes the exams, writes and defends the final – Master paper and acquires at least 60 ECTS.

FACULTY OF TECHNICAL SCIENCES 21000 NOVI SAD, TRG DOSITEJA OBRADOVIĆA 6

Study Programme Accreditation

Standard 02. Programme Objectives

The purpose of the study program of Power Software Engineering is educating the students for the profession of Master in Electrical and Computer Engineering in accordance with the society's needs.

The study program of Power Software Engineering is conceived so that holders of Master Degree in Electrical and Computer Engineering acquire the competence in the field of research oriented approach to software development in general, as well as the software for power systems, in this way providing the basis for social justification and usefulness of this program and its perspective. The Faculty of Technical Sciences in Novi Sad has defined basic assignments and goals in order to provide the education to highly competent resources in the field of engineering, technology, organization, management and making of foundation for scientific and research undertakings in the fields in question. The purpose of the study program of Power Software Engineering is in full compliance with the mentioned basic assignments and goals of the Faculty of Technical Sciences in Novi Sad.

The realization of such a conceived study program means the education to holders of Master Degree in Electrical and Computer Engineering and providing them with the scientific competence in line with both European and world educational standards.

FACULTY OF TECHNICAL SCIENCES 21000 NOVI SAD, TRG DOSITEJA OBRADOVIĆA 6

Study Programme Accreditation

MASTER ACADEMIC STUDIES Power Software Engineering

Standard 03. Programme Goals

The goal of the study program of Power Software Engineering is the acquisition of competence and research and science oriented academic skills in the field of modern information technologies, as well as specific practical skills required for design and development of software for power systems. This includes fostering of creativity in the problem solving process and the ability of critical thinking, but also the encouragement of team work on the realization of research projects with the application of adequate scientific methods.

The goal of the study program is to offer the education to researchers with the required theoretical and practical knowledge in all the needed disciplines, the ability of conducting the research in those disciplines, as well as specific skills in the application of relevant technologies in those disciplines, based on expert knowledge and understanding of engineering laws regulating the mentioned disciplines.

Specific goals, which are in accordance with the goals of Master Academic Studies at the Faculty of TechnicalSciences in Novi Sad, are to raise awareness of the need for constant personal advancement as well as to foster the ability of presenting and communicating one's knowledge and results not only to colleagues, but also to both professional and general public. Another goal is to raise awareness of the problems and responsibilities of professional practice among which are the questions of safety, ethics and ecology and social growth as well.

FACULTY OF TECHNICAL SCIENCES 21000 NOVI SAD, TRG DOSITEJA OBRADOVIĆA 6

Study Programme Accreditation

MASTER ACADEMIC STUDIES

Power Software Engineering

Standard 04. Graduates' Competencies

Upon completing the study program of Power Software Engineering, holders of Master Degree in Electrical and Computer Engineering are capable of inspecting the professional problems, analyzing the problems, synthesizing the solutions to the problems, making critical evaluation of advantages or disadvantages of the solutions, as well as making expert decisions. They have the capacity to continue with their education at the level of doctoral studies.

Specific skills – knowledge and skills of holders of Master Degree in Electrical and Computer Engineering, acquired in this study program include expert knowledge and understanding of disciplines relevant for this study program as the basis for successful dealing with practical problems with the application of appropriate methods and procedures. The ability to relate the basic theoretical knowledge in various fields with their practical application is specially emphasized. Holders of Master Degree in Electrical and Computer Engineering arecapable of formulating, elaborating and presenting of the results of their work in an appropriate way.

Holders of Master Degree in Electrical and Computer Engineering have the competence to apply the acquired knowledge and skills in the practice and to continually make innovations to the knowledge and skills. They also have the competence to generate new expert information as well as the information resulting from scientific and research work and to apply them in their own field of work. In addition, they become qualified for any cooperation in local and international social, public and professional environment.

Finally, holders of Master Degree in Electrical and Computer Engineering obtain a research potential and are capable of participating in team work in which case they can apply the principle of professional and business ethics.

FACULTY OF TECHNICAL SCIENCES 21000 NOVI SAD, TRG DOSITEJA OBRADOVIĆA 6

Study Programme Accreditation

MASTER ACADEMIC STUDIES

Power Software Engineering

Standard 05. Curriculum

The curriculum of Master Academic Studies of Power Software Engineering meets all the set requirements. The standard requiring that the optional subjects are included with at least 30% of ECTS credits is fulfilled. There are only optional subjects in the structure of the study program that enable the students to pursue their inclinations in the field they opted for.

All the subjects are one-semester and carry a certain number of ECTS credits where a point approximately corresponds to 30 classes of students' activities. The sequence of subjects within the study program is such that the knowledge required for the subjects that follow is acquired in the preceding subjects. The curriculum includes descriptions of each subject with the name and type of subject, year and semester of the studies, number of ECTS credits, lecturer's name, requirements for passing of the exams, objective of the subjects with anticipated outcome and competence, content of the subjects, teaching methods, knowledge verification and evaluation, recommended literature and other information.

The study program is in accordance with European standards regarding the entrance requirements, duration of studies, diploma acquiring and the concept of studies.

The integral part of the curriculum of the study program of Power Software Engineering is an internship – practical work with the duration of 45 classes which is completed in appropriate scientific and research oriented institutions, in organizations performing innovations related activities, in organizations giving infrastructure related support to innovation activities and in commercial organizations and public utilities.

The students finish the studies by writing a final – Master paper consisting of theoretical and methodology preparation necessary for more profound understanding of the expert field the paper relates to and completing a final – Master paper representing the application of acquired knowledge and skills in a concrete research work.

Prior to the defense of the final – Master paper the students pass the theoretical and methodology base before the mentor to the paper. The final grade of the final – Master paper is derived from the grade of theoretical and methodology preparation and the paper grade formed on the basis of the quality of the submitted paper, its presentation and answers given to the questions of the committee present at the defense of the paper consisting of at least 3 lecturers. At least one lecturer is a lecturer from another study program or department/faculty/university whose expert field is in accordance with the scientific field of this study program.

Precondition courses	-		None					

1. Educational goal:

Enabling students to collect, handle, archive, programme, synchronize and present multimedia data flow in the network environment.

2. Educational outcomes (acquired knowledge):

Acquired knowledge and skills are used for development/use of software/systems of expressed multimedia.

3. Course content/structure:

Multimedia (concepts, characteristics and media data flow). Characteristics of audio/video/image-graphic media (music-MIDI; speech; video-TV and HDTV / 3D). An overview of standards for compression and optical storage (standard algorithms; JPEG2000 and MPEG 1, 2, 4, 7 and 21; CD DA-ROM-WO-RW; DVD; holograph). MM communication systems (timer-user-control space and CSCW; requirements and limitations of the protocol on presentation-application and network-transportation ISO-OSI levels) and videoconference. MM data base (structures and operations). Synchronization of MM data (four-layer reference model and distributed systems). Program abstraction, tools and applications (programme and script languages; authoring systems and MM kiosk).

4. Teaching methods:

Lectures, Computer Practice, Consultations. The course is organized in 2 wholes which are checked in the form of 2 tests during the lectures. During Practice, multimedia contents are presented and manipulated on programs (DirectX or OpenGL) or authoring (Flash) levels, creating simple systems for exchange of multimedia contents in real time. The quality of the Practice work is evaluated. Successfully solved exercises are the examination prerequisites. The examination is taken in the written form. Points won at the examination, tests and prerequisites are added to form the final grade.

1. Educational goal:

Students become familiar with the concepts, techniques and chosen examples of the application of the fuzzy approach.

2. Educational outcomes (acquired knowledge):

Students acquire knowledge in the concepts taken from the fuzzy sets and fuzzy logic theory. Besides, they become familiar with certain approaches and methods of application.

3. Course content/structure:

Fuzzy sets. Fuzzy logic. Probability theory. Approximation decision making. Fuzzy aggregation operators, fuzzy relations, fuzzy clustering. Application in decision making, data search, shape recognition, control.

4. Teaching methods:

Lectures. Computer practice. Tutorial work.

The practical part of the course is evaluated through laboratory work by solving obligatory tasks. Students are encouraged to do additional tasks at their own will as well. The tasks are graded. A part of the subject matter that forms a unit can be taken as a partial exam-colloquium (from 2 to 4). The partial exam is a part of the examination. The student can take the next partial exam only if they have gathered at least 30% of points at the previous partial exam. Partial exams are taken in the written form. The final part of the examination is an oral exam. The grade at the exam is formed by adding all the points a student has gathered during the course: by attending the lectures, completing the obligatory tasks, papers, passing the partial exams and the final examination.

1. Educational goal:

Advanced education of students in the field of Database Management Systems (DBMS) applications, and database (DB) administration, with the possibility of their easy involvement in industry projects in the field of database system development.

2. Educational outcomes (acquired knowledge):

Acquiring of skills and knowledge necessary for the application of DBMSs in practice and database administration.

3. Course content/structure:

Features and tasks of DBMSs. Physical architecture of a DBMS. Memory management in a DBMS. File management in a DBMS. Physical database organization and performance management. Techniques for the usage of views, sequence generators and indexes at the DB server. Advanced SQL capabilities for database updates and queries. Query optimizers. Mechanisms for providing DB security and safety. DB backup, restore and recovery. Implementation of distributed databases. Software tools for database administration.

4. Teaching methods:

Teaching is performed through lessons, oral and computer exercises (in the computer classroom), as well as consultations. Through the teaching process, students are constantly motivated to an intensive discussion, problem oriented reasoning, independent study work and active participation in the whole lecturing process. The prerequisite to enter final exam is to complete all the pre-exam assignments by earning at least 30 points.

1. Educational goal:

The aim of this course is to give students specific knowledge in engineering of Smart Grid applications in Cloud.

2. Educational outcomes (acquired knowledge):

Students passing this exam will have capacities for realization of Cloud systems in the Smart Grid.

3. Course content/structure:

In this exam candidates will learn specific Smart Grid software components and implementation of such components in Cloud environment: Shared memory; Pub/Sub; Replication; Load balancing; Distributed Logging, Distributed Alarming; Resource management and auto-scaling; HPC in Cloud; Real time in Cloud; Communication protocols with field devices; Fault tolerance; Availability etc.

4. Teaching methods:

Teaching is conducted through lectures and laboratory excercises. The lectures have a theoretical focus with a number of characteristic examples enforcing easier understanding. The laboratory excercises are linked to the lectures with more practical examples. Students are required to complete practical tasks during laboratory excercises. Apart from lectures and lab excercises, the candidates will have consultations with their professors.

1. Educational goal:

The objective of this course is to acquire the knowledge to visualize the state of power grid systems.

2. Educational outcomes (acquired knowledge):

Course outcomes are mastering the knowledge and skills necessary for selection (development) of appropriate real-time visualization technique of power grid systems (and other systems with modest characteristics) at a given level of detail.

3. Course content/structure:

Basic concepts and general principles of data visualization techniques in power grid. Techniques and associated algorithms for the visualization of linear and hierarchical data structure, multidimensional metadata and huge collections of text and objects. Special attention is given to techniques and algorithms for the visualization of networks and graphs - adjacency matrix by forcing a predetermined spatial positions (linear, circular, mesh and geographic) or layered drawing. Techniques and algorithms are illustrated with examples using various display options (color depth and resolution) as well as the context of use (personal use and/or group/audience, observations and/or complete control, with or without multimedia streams).

4. Teaching methods:

Teaching is conducted through lectures and computer lab exercises. During the computer practice student is required to complete practically oriented tasks.

2. Educational outcomes (acquired knowledge):

The outcome of the subject is acquiring knowledge, skills and capacities for active approach to tasks in critical mission software systems applied in power grids.

3. Course content/structure:

Application of SCADA/DCS systems in critical power and infrastructure systems. The main requirements related to designing and managing of this class systems. Introduction to the legal regulations governing use of computer technologies in this area. Reliability and availability of control system. Redundant structures. Security aspects. Expanding of the basic SCADA systems by subsystemfor expert management in real time. Integration of control systems with GIS and decision support systems. Architecture of critical infrastructure control systems and control algorithms. Analysis of typical applications for: energy transport and distribution (electrical, gas, oil), complex industrial plants (refineries), traffic control. Analysis of acctual examples.

4. Teaching methods:

Teaching is conducted through the lectures and computer practice. Throughout the computer practice student is required to complete practically oriented tasks.

1. Educational goal:

The aim of the subject is detail study of methods for simulation of critical mission software systems applied in power grids.

2. Educational outcomes (acquired knowledge):

The outcome of the subject is capacity to design simulator of critical mission software systems applied in power grids.

3. Course content/structure:

Simulation environments for development and verification of application specific control code for SCADA systems implemented in critical mission power grids. Use and classification of SCADA simulation environments. Protocol simulators. Plant simulators: discrete and analog simulation – notion and characteristics. Dispatcher training simulators. Integration of Simulink code with SCADA simulator. Case studies of different real-world critical mission systems with stress on power systems.

4. Teaching methods:

Teaching is conducted through the lectures and computer practice. Throughout the computer practice student is required to complete practically oriented tasks.

Course:								
Course id:	ESI037		Smart Grid security and safety					
Number of ECTS:	6							
Teachers:		Lendak I.	endak I. Imre, Pavlica N. Vladimir					
Course status:		Elective	Elective					
Number of active tead	hing classe	es (weekly	r)					
Lectures:	Practical	classes:	Other teaching types:	Study research work:	Other classes:			
3	C)	2	0	1			
Precondition courses			None					

1. Educational goal:

The aim of this course is to familiarize the candidates with advanced concepts of secure and dependable power systems, with a special emphasis on Smart Grid systems.

2. Educational outcomes (acquired knowledge):

Candidates passing this exam will be capable of planning and implementing secure and dependable power systems within the Smart Grid.

3. Course content/structure:

A short history of known security breaches in Smart Grids. General security policy for improving the security and dependability of Smart Grids. External and internal security threats. Physical security of critical infrastructure systems. The Internet and its effect on the security and dependability of Smart Grids. Advanced mechanisms of intrusion detection and advanced defense mechanisms. Secure networks of Smart Meters. Legal aspects and consumer data privacy.

4. Teaching methods:

Teaching is conducted through lectures and laboratory excercises. The lectures have a theoretical focus with a number of characteristic examples enforcing easier understanding. The laboratory excercises are linked to the lectures with more practical exmaples. Candidates are required to complete practical tasks during laboratory excercises. Apart from lectures and lab excercises, the candidates will have face-to-face consultations with their professors.

MASTER ACADEMIC STUDIES

Course:									
Course id:	ESI030	Dis	Distributed Software Architectures for Smart Energy Grids						
Number of ECTS:	6								
Teachers: Erdeljan M. Aleksandar, Nimrihter D. Miroslav, Pavlica N. Vladimir									
Course status:		Elective							
Number of active teac	Number of active teaching classes (weekly)								
Lectures:	Practical	classes:	Other teaching types:	Study research work:	Other classes:				
3	0		2	0	1				
Precondition courses			None						

1. Educational goal:

The goal of this course is to acquire the necessary knowledge about the concepts and paradigms of distributed systems and their implementation in the power systems.

2. Educational outcomes (acquired knowledge):

Outcomes are the knowledge, skills and abilities necessary for understanding the complexity of distributed systems and solve practical engineering problems in power systems.

3. Course content/structure:

Introduction: Smart Grid business and functional requirements. Smart Grid infrastructure requirements and challenges: scalable software platforms, information streaming from millions of smart meters, computational intensive applications, forecast power usage and respond to operational events, monitoring and control of energy assets for their optimal use. Data sources and models in Smart Grid: power grid data model, asset data, forecasting computational models, customer load model, dynamic pricing of power, etc. Services for Smart Grid systems. Logical architecture and interfaces of the Smart Grid. Processing and data flows: SCADA software, advanced DMS software, demand/response optimization services, stream data (from sensors and Smart Meters) processing, scheduling latency sensitive applications. Real-time, two-way communication between utilities and consumers. System-of-Systems architectures: Silo architecture, Integration using Enterprise Service Buses, Adapter Architecture, Architecture Based on Open Standard Service Mechanisms. Architectures based on centralized systems at utilities and Clouds. Reference architecture as the basis for development of the "integrated utility of the future". Security aspects: scalable data sharing and privacy preservation.

4. Teaching methods:

Teaching is conducted through lectures and computer exercises. During the exercises the student is required to apply their knowledge in practice.

MASTER ACADEMIC STUDIES

Course:		Business Intelligence and Data Warehouse Systems in Power						
Course id:	ESI031		Systems					
Number of ECTS:	6		Cyclemo					
Teachers:		Nimrihter	rihter D. Miroslav, Gavrić M. Milan, Pavlica N. Vladimir					
Course status:		Elective						
Number of active tead	hing classe	es (weekly	r)					
Lectures:	Practical	classes:	Other teaching types:	Study research work:	Other classes:			
3	()	2	0	1			
Precondition courses			None					

1. Educational goal:

Advanced students' education in the Data Warehouse (DW) system development and its application in Business Intelligence, i.e. software support of strategic and tactic management in organization systems.

2. Educational outcomes (acquired knowledge):

To gain necessary skills and knowledge for the design and implementation of business intelligence and data warehouse systems in industry practice, as well as coupling DW systems with decision support systems.

3. Course content/structure:

Characteristics, tasks and application domains of DW in power systems. Strategic system analysis as a prerequisite for the development of DW and business intelligence systems. Planning the DW system development process. A common methodology of the DW system development. A common DW system architecture. Enterprise DW systems and Data Mart systems. A common structure and the design of database schemas for DW systems. Methods and techniques of the initial load and subsequent refreshing of a DW database. Extraction, transforming and loading data into a DW database – ETL process. Computation of aggregated data in DW databases. Database Management Systems' mechanisms aimed at providing various DW system implementations. Preserving operational performances of DW systems. Decision support systems. OLAP tools and data analyses. Reporting techniques and tools. Data Mining techniques and tools in DW systems.

4. Teaching methods:

Teaching is performed through lessons, oral and computer exercises (in the computer classroom), as well as consultations. Through the teaching process, students are constantly motivated to an intensive discussion, problem oriented reasoning, independent study work and active participation in the whole lecturing process. The prerequisite to enter final exam is to complete all the pre-exam assignments by earning at least 30 points.

1. Educational goal:

The objective of this course is to acquire the knowledge and programming skills at the geometry and the rasterization levels of 3D graphics pipeline that are required for successful implementation of smart grid systems.

2. Educational outcomes (acquired knowledge):

Course outcomes are mastering the knowledge, skills and abilities required for programming graphical objects drawing on parallelism of modern GPU at both the OpenGL (or DirectX) and the GLSL (HLSL) levels.

3. Course content/structure:

Overview of matrix and vector calculus. Detailed studies of 3D graphics pipeline and transformations within the geometry/rasterize phases. The internal architecture of a modern GPU. Advanced algorithms for simplifying a mesh model. Vertex shaders. Advanced algorithms for projection and clipping (intersection test methods and collision detection). Culling algorithms. Advanced techniques for texturing and effects. Pixel shaders. Algorithms and data structures for accelerating graphics real-time rendering, used in smart grid.

4. Teaching methods:

Teaching is conducted through lectures and computer lab exercises. During the computer practice student is required to complete practically oriented tasks.

1. Educational goal:

The main course objective is acquiring knowledge on specialized DMS software and specialized DMS algorithms.

2. Educational outcomes (acquired knowledge):

Knowledge on specialized mathematical models and algorithms for modelling and solving problems of distribution networks. Preparation for using DMS software.

3. Course content/structure:

The main terminology: (un)balanced elements and (un)symmetrical states, distribution networks characteristics, consumer modelling (characteristic consumers, consumption coefficients, simultaneous coefficients, "Predictive Load Model"), local automation (ARN, voltage regulator, condensation batteries) and equivalencing of network parts.

DMS software and its structure. Data structure. Structure of DMS applications, functions for: controlling and surveillance of network, operation planning and optimization, system operation analysis and planning of distributive network development.

Specialized DMS applications and algorithms: Load Profile Tool, Load Flow & Performance Indices, State Estimation, Volt Control, Var Control, Volt/Var Control, DSDR, FLISR, Closed Loop, LV equivalent, sensor, VR & CB placement, DG management, Forecasting (NTLF, STLF), etc.

Practical application of specialized DMS applications and algorithms.

1. Educational goal:

Students acquire the knowledge about the techniques, structure and form of writing a research report after completing analysis and other activities conducted within the given topic of the master thesis. By writing a master thesis students gain the experience of writing papers which require the description of the problem, the methods and procedures in conducting research and the obtained results. In addition, preparation and defence of master thesis has the goal of developing the students' ability to prepare the results of their individual form and present it in a suitable form to a wider audience as well as respond to comments and questions related to the thesis topic.

2. Educational outcomes (acquired knowledge):

Students are able to develop a systematic approach to the given problem, conduct analysis, apply the acquired knowledge and gain knowledge in other areas for the purpose of finding a solution to the given problem. By working independently on solving the given tasks, students gain awareness of the complexity of the problem in their professional field. By working on the master thesis students gain experience which they can use in practice when solving the problems in their professional field. In preparation for defending their results in public and answering the questions and comments of the thesis committee, the student attains the necessary practical experience on how to present the results of their individual or collective work before an audience.

3. Course content/structure:

The content is defined individually, in accordance with the needs and field to be covered by the master thesis. In consultation with the supervisor the student produces the master thesis in written form according to the rules of the Faculty of Technical Sciences. After preparation the student defends the thesis in public as arranged with the thesis supervisor and in accordance with the prescribed rules and procedures.

4. Teaching methods:

During the preparation of the master thesis the student consults with the thesis supervisor, and, if necessary, other professors who work in the area covered by the master thesis. The students writes the paper and, having obtained the approval of the thesis committee, provides them with bound copies of the work. The master thesis is defended in public, and the student is obliged to answer the questions and comments after the oral presentation.

Knowledge evaluation (maximum 100 points)									
Pre-examination obligations	Mandatory	Points	Final exam	Mandatory	Points				
Writing the master thesis	Yes	50.00	Master thesis defence	Yes	50.00

Study Programme Accreditation

MASTER ACADEMIC STUDIES

Power Software Engineering

Standard 06. Programme Quality, Contemporaneity and International Compliance

The study program of Power Software Engineering at the Faculty of Technical Sciences in Novi Sad is in compliance with modern European and worldwide educational and scientific trends in the field of Electric and Computer Engineering in Europe and worldwide.

The study program of Power Software Engineering at the Faculty of Technical Sciences in Novi Sad is comparable to similar programs at the following international higher education institutions:

- 1. National Technical University of Athens, School of Electrical and Computer Engineering, Greece (http://http://www.ece.ntua.gr/index.php?option=com_courses)
- 2. Faculty of Electrical Enginering and Information Technology, University of Hannover, Germany (http://www.et-inf.uni-hannover.de/etech-it.html?&L=1)
- 3. Faculty of Electrical Enginering, Graz University of Technology, Austria (http://portal.tugraz.at/portal/page/portal/TU_Graz/Studium_Lehre/Studien/ET_Bachelor)
- 4. Department of Information Technology, Uppsala University http://www.it.uu.se/
- 5. Faculty of Electrical Engineering and Information Technology, Leipzig University http://www.eit.htwk-leipzig.de/
- 6. Intelligent Reliable Systems (Information Technology), Aalborg University http://www.studyguide.aau.dk/programmes/postgraduate/55773/academic-content/

The study program of Power Software Engineering is conceived to offer a comprehensive education to students and the most modern and expert knowledge and skills in the field in question.

FACULTY OF TECHNICAL SCIENCES 21000 NOVI SAD, TRG DOSITEJA OBRADOVIĆA 6

Study Programme Accreditation

Power Software Engineering

Standard 07. Student Enrollment

MASTER ACADEMIC STUDIES

According to the society's needs and available resources, the Faculty of Technical Sciences accepts a number of students at the Master Academic Studies, the study program of Power Software Engineering, who are either financed by the budget or self-financed. The number of the students is defined by a special decision of Educational-Scientific Council of the Faculty and founders' decisions. The selection of applicants and their enrolment is done on the basis of average grades during the previous education and results of the entrance examination, which is defined by the Regulation on student enrolment in study programs.

Students in other study programs, as well as individuals who graduated from other undergraduate academic studies may enroll in this study program as well. The Committee for Evaluation (consisting of the heads of all departments participating in the realization of the study program and the manager of the study program) evaluates all the exams passed and other activities of the candidate which are relevant for the enrolment and on thebasis of the recognized number of points it is determined whether the candidate can be enrolled in the Master Academic Studies of the chosen study group – module. The exams passed and evaluated activities are recognized entirely, partly with the corresponding additional work or are not recognized at all.

FACULTY OF TECHNICAL SCIENCES 21000 NOVI SAD, TRG DOSITEJA OBRADOVIĆA 6

Study Programme Accreditation

MASTER ACADEMIC STUDIES

Power Software Engineering

Standard 08. Student Evaluation and Progress

The final grade in every of subjects of this study program is formed by continual observation of the work andresults the students achieved during the lectures, completion of pre exam assignments and in the final exam.

The students master the study program by passing exams thus obtaining a certain number of ECTS credits, in accordance with the curriculum of the study program. Every subject in the program carries a certain number of ECTS credits gained with each exam passed. The number of ECTS credits is determined on the basis of the amount of work students perform in mastering of a certain subject and by application of unique methodology of the Faculty of Technical Sciences in Novi Sad for all study programs. The success of students in mastering of a certain subject is continually observed and is evaluated with credits. The maximum number of credits a student can acquire in a subject is 100.

The students acquire the credits in a subject by attending the lectures, by fulfilling the pre-exam assignments and by passing the exams. The minimal number of credits a student can acquire by fulfilling the pre exam assignments throughout the lectures is 30 and the maximum 70.

Every subject in the study program has a clear and published mode of credits acquisition including the credits a student acquires on the basis of every particular activity defined in the syllabus or by fulfilling the pre exam assignments and by passing the exams.

The students' final achievement in a subject is graded from 5 (failed) to 10 (excellent). The students' gradeis based on the total number of credits the students acquired by fulfilling the pre exam assignments and by passing the exams, taking into account the quality of acquired knowledge and skills. In order for the students to be able to take an exam in a specific subject, they are obliged to acquire at least 55% credits in the preexam assignments during the semester in which the lectures take place. Additional requirements for passing the exams are defined by the syllabus for every subject separately.

The advancement of the students throughout the studies is defined by the Rules of studying on undergraduate academic studies.

FACULTY OF TECHNICAL SCIENCES 21000 NOVI SAD, TRG DOSITEJA OBRADOVIĆA 6

Study Programme Accreditation

Power Software Engineering

Standard 09. Teaching Staff

MASTER ACADEMIC STUDIES

For the realization of the study program of Power Software Engineering of Undergraduate Academic Studies at the Faculty of Technical Sciences in Novi Sad the teaching staff having the required professional and scientific qualifications is assigned.

The number of lecturers is in accordance with the requirements of the study program and is determined by the number of subjects and the number of classes within the subjects. The total number of lecturers is sufficient for realization of the total number of classes in the study program so the lecturers realize 180 classes of active teaching on average per year (lectures, consultations, practice, practical work, etc.) or 6 classes on average per week. None of the lecturers realizes more than 12 classes per week, either at the Faculty of Technical Sciences in Novi Sad or any other higher education institution in Serbia. Out of the total number of required lecturers, more than 70% is employed on a permanent basis at the Faculty of Technical Sciences in Novi Sad.

The number of associates is in accordance with the requirements of the study program. The total number of associates is sufficient for realization of the total number of classes in the study program so the associates realize 300 classes of active teaching on average per year or 10 classes on average per week. None of the lecturers realizes more than 20 classes per week, either at the Faculty of Technical Sciences in Novi Sad or any other higher education institution in Serbia.

Scientific and professional qualifications of the teaching staff are in accordance with academic and scientific area and specialist field in question and the level of their duties as well. Each lecturer has at least five references from specialist or scientific and professional field in question within the study program.

The maximum number of students in a group is 180, in a group for auditory practice it is 60, and group for calculation, computer and laboratory practice it is 20 students.

All the information on lecturers and associates (CVs, academic career, representative references) are available to public via the Internet web site of the Faculty of Technical Sciences in Novi Sad and other means available to the public.

Study Programme Accreditation

MASTER ACADEMIC STUDIES

Power Software Engineering

Standard 10. Organizational and Material Resources

For realization of the study program of Power Software Engineering at the Faculty of Technical Sciences in Novi Sad, adequate human, spatial, technical and technological, laboratory, library and other resources are provided. They are all in accordance with the nature and requirements of the study program and predicted number of students. The teaching of the study program of Power Software Engineering is performed in 2 shifts so that more than 2m2 per student are provided.

The teaching takes place in amphitheaters, classrooms, computer and specialized laboratories. The library hasmore than 300 library units relevant for realization of the study program of Power Software Engineering. For all the subjects of the study program of Power Software Engineering, appropriate textbook literature, devices and supplementary equipment are available on time and in a sufficient number for normal performance of the teaching process. The adequate information technology support is also available for performing of the study program.

The Faculty of Technical Sciences in Novi Sad has a library and reading room and provides every student with a seat in the amphitheater, classroom and laboratory, thus meeting the requirements of all teaching activities.

Table 10.1 List of rooms with their surface in higher education institution where the teaching of the study program takes place.

FACULTY OF TECHNICAL SCIENCES 21000 NOVI SAD, TRG DOSITEJA OBRADOVIĆA 6

Study Programme Accreditation

Power Software Engineering

Standard 11. Quality Control

MASTER ACADEMIC STUDIES

The quality of the study program of Power Software Engineering of Master Academic Studies as well as all the other study programs of the Faculty of Technical Sciences in Novi Sad is provided by the functioning of the Quality Management System which was established at the Faculty in 2000, in accordance with the international standard ISO 9001 and certified by Federal Administration for Standardization as authorized domestic institution within TUV Nord as recognized authorized international institution for quality management system certification. The effectiveness and efficiency of the Quality Management System is confirmed by annual supervisory checks and by four re-certifications by the mentioned institutions.

Within the Quality Management System, the quality guarantee and quality control of the study program are supported by appropriate codes of conduct of all participants in the teaching process – procedures for creation of teaching programs, for enrolment of students, for realization of teaching process, for evaluation of students, for writing of the final – Master paper, for functioning of the Student Services, for Library Work, for evaluation of the success of the studies, for evaluation of the quality of teaching process by students and other procedures relating to resources and logistics of teaching process.

As a part of the Quality Management System, the practice of evaluation of users' and employees' satisfaction has been established: conducting opinion polls to students during the studies, at the end of teaching processin every subject where the students evaluate the quality of the program, realization of teaching process, literature and lecturer of the subject; conducting opinion polls to students upon the verification of enrolmentin the following scholar year when they evaluate the quality of the study program and logistic support duringthe studies; conducting opinion polls to students at the end of studies, at the ceremony of handing out the diplomas when they evaluate the quality of the study program and logistic support during the studies. Other than that, the comfort of studying is evaluated (hygiene in the classrooms etc.); conducting opinion polls to teaching and non-teaching staff, when the work of Dean's Office, Student Service, Library and other services ofthe Faculty are evaluated as well.

For conducting the quality control of the study program, a special Committee has been formed, consisting of the manager of the study program, heads of all chairs participating in the realization of the study program, managers of all modules in the study program and a student in every year of study.

Self-evaluation of the study program is done within self-evaluation of the Faculty of Technical Sciences in Novi Sad as an institution and a corresponding "Report on self-evaluation of the institution" incorporates allthe elements of quality of the study program, including the participation of students in self-evaluation and quality evaluation.

Standard 12.
